Wikipedia Android App

Manual Test Report

Tester	Aqsa Shoukat
App	Wikipedia (by the Wikimedia Foundation), installed from the Play Store
App build	50612-r-2026-10-19 (from the About page of the app)
Phone	Oppo A3 with Android 14
When	23 and 24 October 2026
Type of testing	Manual and exploratory, done by hand on my own phone
Account	Not logged in. I used the app as a normal visitor.

Android version on my phone

App build number from the About page

About this test

I wanted to test a real mobile app and not only websites, so I picked the Wikipedia app. It is free, it is made by a trusted organisation and it has things a tester can play with: search, reading, saving articles and working without internet. I looked at how the app behaves when I use it the normal way and also when I do odd things, like empty search, strange characters and airplane mode.

Every test below has the screenshot I took on my phone, what I did, what I expected and what really happened. I kept the clock visible in the screenshots so the time can be checked. Some screenshots are cropped. I cropped out pages about politics and my own phone wallpaper.

The app is public and not mine, so I stayed away from anything that changes real data. I did not edit any page, I did not log in and I did not donate.

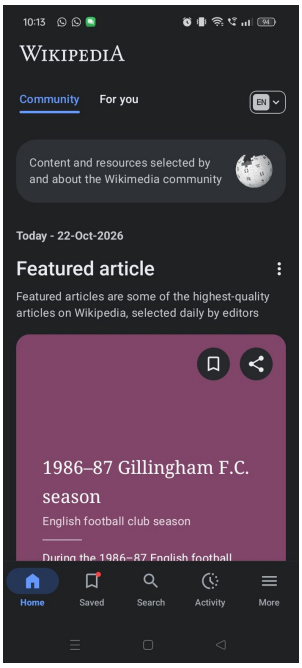

Result in short

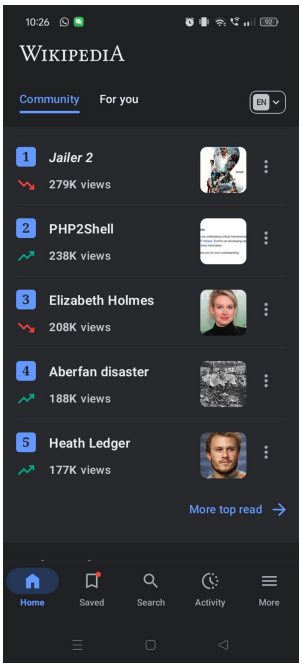

Total tests	**26**
Pass	**14**
Pass with a note	**9**
Partly tested or not fully tested	**3**
Real bugs found	**0**

I did not find a real bug in the parts I could test. I found small things that I wrote down as notes. I did not want to call them bugs, because I cannot say that the app team did something wrong. They are things a user could trip over, and the list is on the last pages.

Home and Search

TC-WK-01 Home screen loads

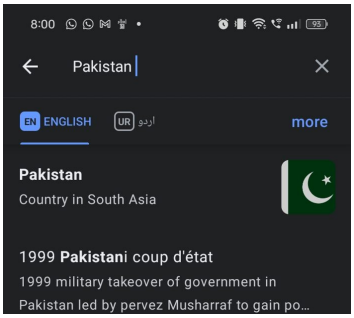

What I did
I opened the app and scrolled down the Home tab.

What I expected
All the sections should load with pictures and text.

What happened
Featured article, Top read, Did you know, In the news, On this day and Picture of the day all loaded. In the Top read list one small thumbnail showed a bit of text instead of a picture.

Result: Pass with note

TC-WK-02 Search for a normal word

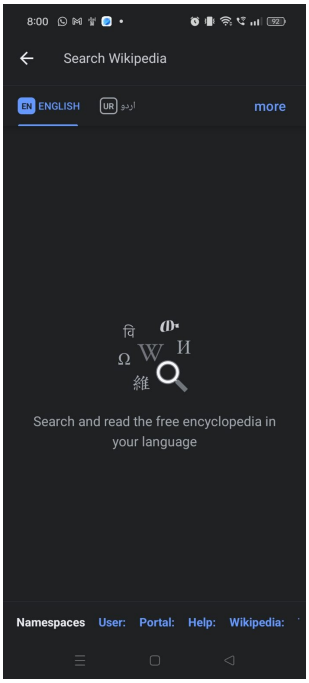

What I did
I typed Pakistan in the search box.

What I expected
Results about Pakistan should show up with pictures.

What happened
Results came quickly. The Pakistan Army result showed a plain grey box where the picture should be.

Result: Pass with note

TC-WK-03 Empty search

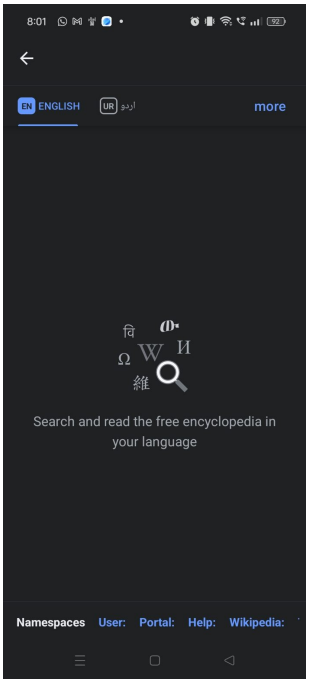

What I did
I opened the search box and typed nothing.

What I expected
No crash. The app should show some helpful text.

What happened
It showed the message "Search and read the free encyclopedia in your language".

Result: Pass

TC-WK-04 Only spaces

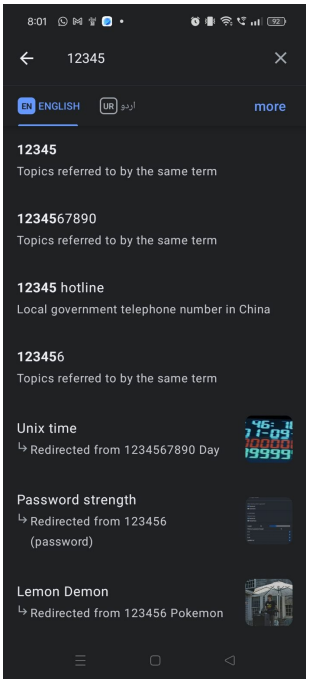

What I did
I typed a few spaces and nothing else.

What I expected
It should behave like an empty search and not show random results.

What happened
The screen stayed the same as the empty search. You cannot see the spaces in the screenshot.

Result: Pass

TC-WK-05 Numbers only

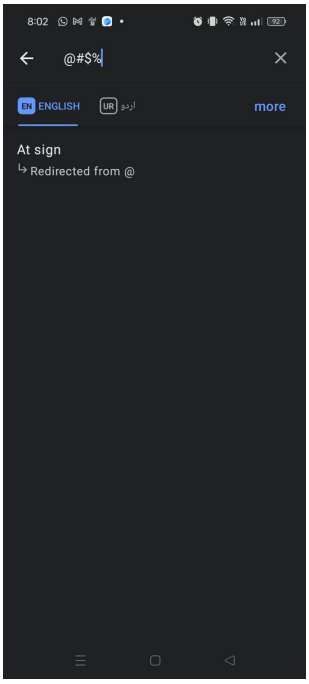

What I did
I typed 12345.

What I expected
Sensible results and no error.

What happened
I got pages about the number 12345 and some pages that redirect from similar numbers.

Result: Pass

TC-WK-06 Special characters

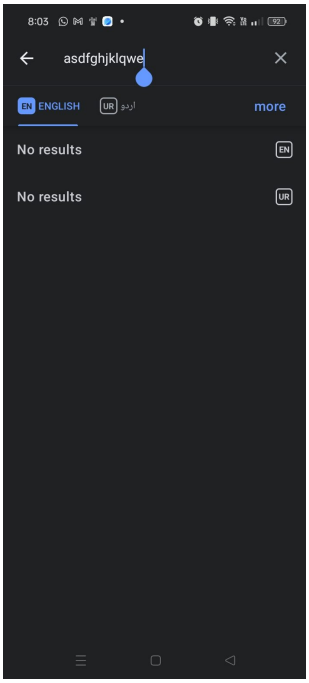

What I did
I typed @#$%.

What I expected
The app should not crash.

What happened
It showed one result called "At sign". The app was fine.

Result: Pass

TC-WK-07 Word that means nothing

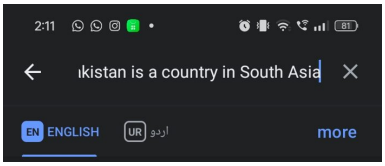

What I did
I typed asdfghjklqwe.

What I expected
A clear message that nothing was found.

What happened
It showed "No results" under both the English and the Urdu tab.

Result: Pass

TC-WK-08 Very long text

What I did
I typed a sentence of about 240 characters that starts with "Pakistan is a country in South Asia". I used the same sentence again when I checked recent searches.

What I expected
The box should accept it and the app should not freeze.

What happened
The text was accepted, the search ran and results came back. The results did not look related to my sentence. I cropped the results out of the screenshot on purpose, because they were about politics.

Result: Pass with note

TC-WK-09 Search in Urdu

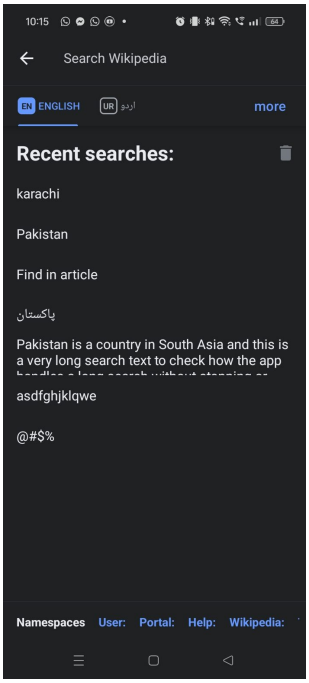

What I did
I tapped the Urdu tab and searched for the Urdu word for Pakistan.

What I expected
Urdu results that read from right to left.

What happened
The results came in Urdu, the text sits on the right side and the pictures on the left. This looked correct to me.

Result: Pass

TC-WK-10 Recent searches

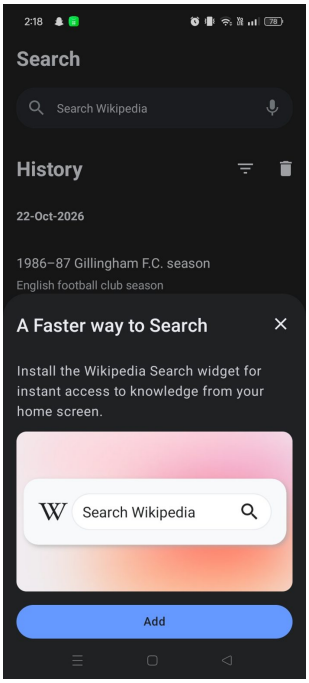

What I did
I opened the search page again after a few searches.

What I expected
My earlier searches should be remembered.

What happened
The list under "Recent searches" showed all my earlier searches. There is a dustbin icon to clear them. I did not press it.

Result: Pass

TC-WK-11 Search widget pop up

What I did
A pop up called "A Faster way to Search" came up on the search page.

What I expected
It should close with the X and not keep coming back.

What happened
I only saw it once. I did not test the X button, the Back button or whether it comes back again.

Result: Not fully tested

Reading an article

TC-WK-12 Open an article

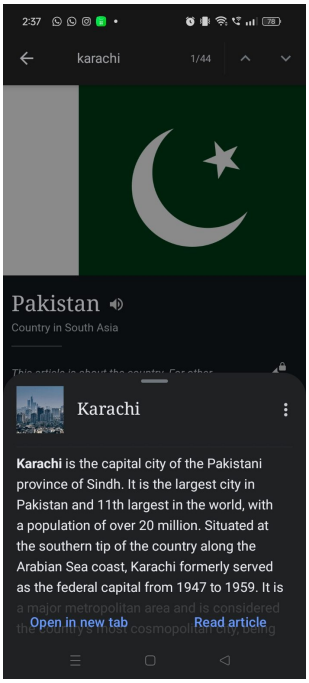

What I did
I tapped the first result for Pakistan.

What I expected
The article should open with a picture, a title, text and the toolbar at the bottom.

What happened
It opened properly. The bottom bar has Save, Language, Find in article, Theme and Contents. The edit pencil has a small lock on this page, so I think the page is protected. I did not tap the pencil because it could try to edit the real Wikipedia.

Result: Pass

TC-WK-13 Tap a word inside the article

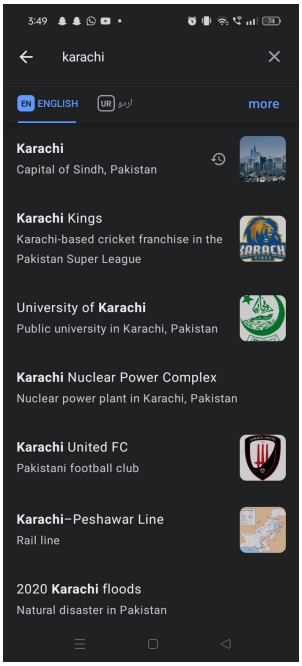

What I did
I tapped a blue link and also tapped a highlighted word (Karachi).

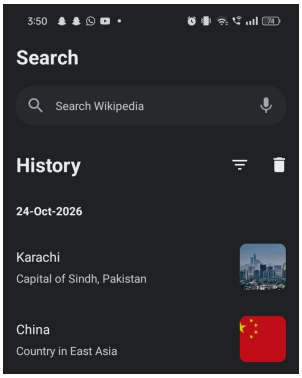

What I expected
The linked page or a preview should open.

What happened
A small preview card opened with a short text, a picture and two buttons, Open in new tab and Read article. The button words sit on top of the text behind them, which is a bit hard to read. At times the card showed a spinning circle for a moment before the text came.

Result: Pass with note

TC-WK-14 Phone Back button

What I did
I opened some articles through links and then pressed the phone Back button again and again.

What I expected
Each press should go back one step and the app should not crash.

What happened
Back went from the article to the search results, then to the Search page with History, and one more press closed the app and showed the phone home screen. The small number near the top right (open articles) went up when I opened links and down when I pressed Back.

Result: Pass

TC-WK-15 Find in article

What I did

I tapped Find in article and typed karachi in small letters. Then I typed zzzz.

What I expected

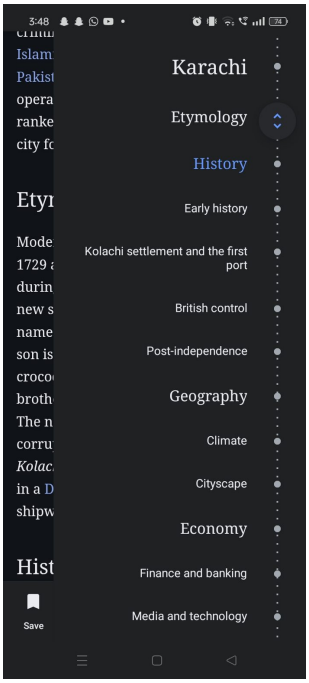

The word should be highlighted. For zzzz the app should show that nothing was found.

What happened

For karachi the top showed 1/44 and the word was highlighted in yellow, even though I used small letters. For zzzz it showed 0/0 in red and the arrows turned grey. There was no written message like "no match", only the red 0/0.

Result: Pass with note

TC-WK-16 Contents

What I did

I tapped Contents in the bottom bar.

What I expected

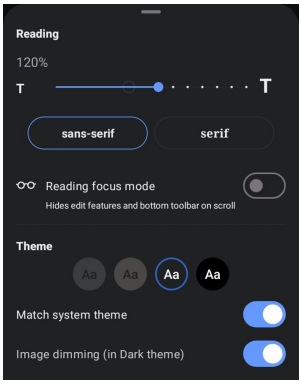

A list of the sections of the article should open.

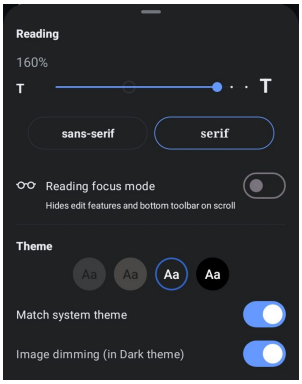

What happened

The list opened and the section I was reading was shown in blue. I did not tap a section to jump to it, so the jump is not tested.

Result: Partly tested

TC-WK-17 Text size and font (Theme)

What I did

I opened Theme, moved the size to 120 percent and then 160 percent, and changed sans-serif to serif.

What I expected

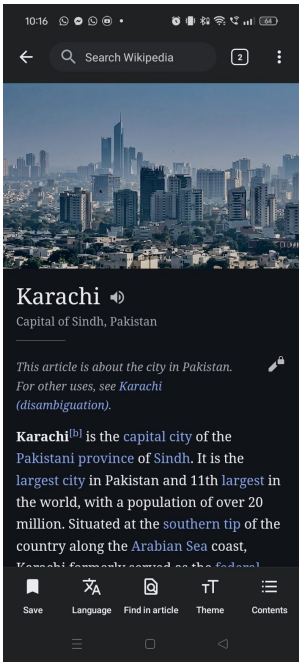

The article text should change.

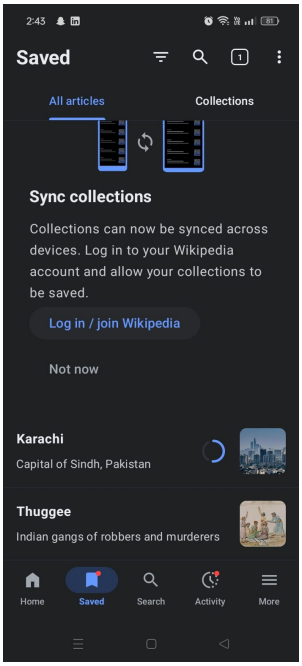

What happened

The text became bigger and the font changed. The panel also has reading focus mode, theme colours, match system theme and image dimming. I did not try those.

Result: Pass

TC-WK-18 Save an article

What I did

I opened the Karachi article and tapped Save.

What I expected

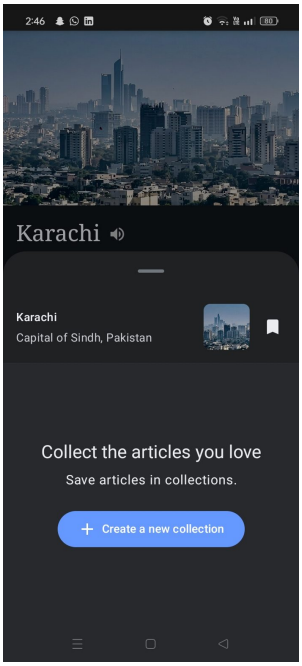

The bookmark should fill and the article should appear in the Saved tab.

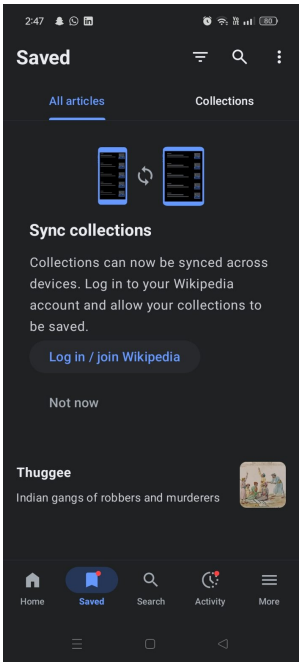

What happened

The bookmark filled and a panel came up that says "Create a new collection". Karachi showed in the Saved tab. The app does not show a clear message like "Article saved". I only knew because the icon changed. I did not create a collection.

Result: Pass with note

TC-WK-19 Remove a saved article

What I did
I tapped the filled bookmark again.

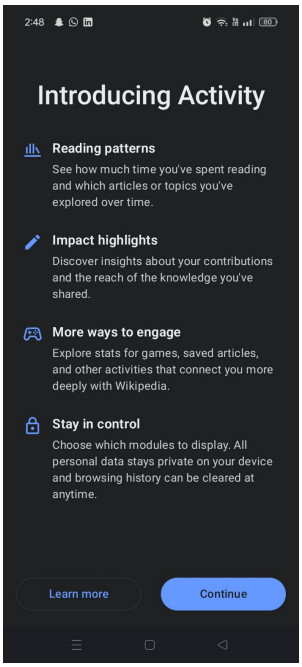

What I expected
The article should leave the Saved list.

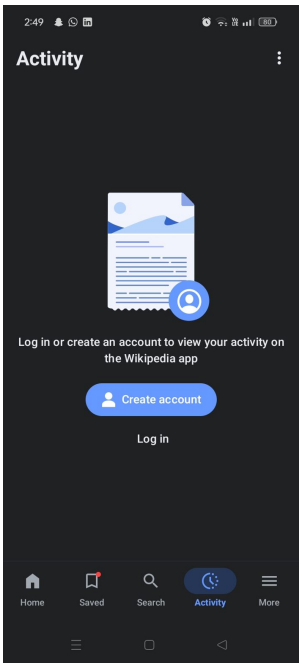

What happened
Karachi was gone from the list afterwards and the other saved article stayed.

Result: Pass

Other tabs

TC-WK-20 Activity tab

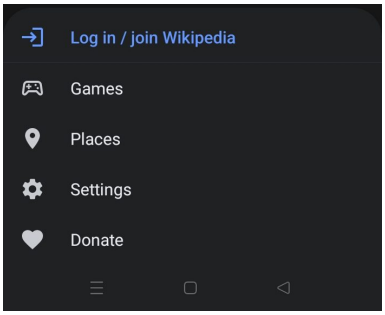

What I did
I tapped Activity, then Continue on the "Introducing Activity" screen.

What I expected
The activity page should open.

What happened
The page only asks me to log in or create an account. I did not do either, so I could not test what is inside Activity.

Result: Partly tested

TC-WK-21 More tab

What I did
I tapped More in the bottom bar.

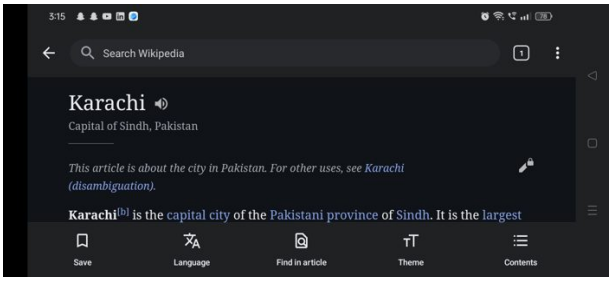

What I expected
A menu should open.

What happened
The menu shows Log in or join Wikipedia, Games, Places, Settings and Donate. I did not tap Log in or Donate.

Result: Pass

Phone related tests

TC-WK-22 Rotate the phone

What I did
I turned the phone sideways while the Karachi article was open.

What I expected
The screen should turn and the text should stay readable.

What happened
The app turned to landscape and nothing was cut or broken. I stayed on the same article. The top bar and bottom bar take a lot of space, so only two or three lines of text are left to read. When I turned the phone back it looked normal again. At first it did not turn because auto rotate was off on my phone.

Result: Pass with note

TC-WK-23 Airplane mode, article already open

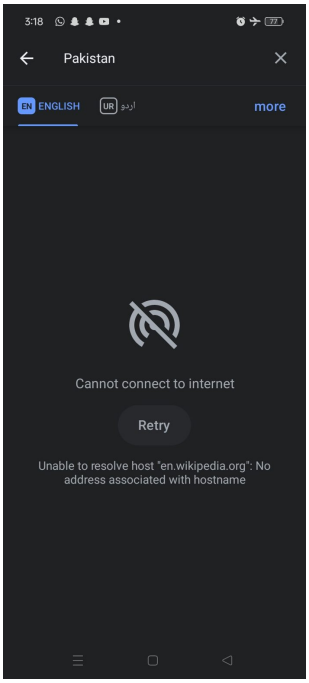

What I did
I turned on airplane mode and scrolled the open Karachi article.

What I expected
The article should stay readable.

What happened
The article scrolled fine with text and links. The plane icon is visible at the top of the screenshot. I think the article was already on the phone, but I am not sure how the app keeps it.

Result: Pass

TC-WK-24 Airplane mode, search

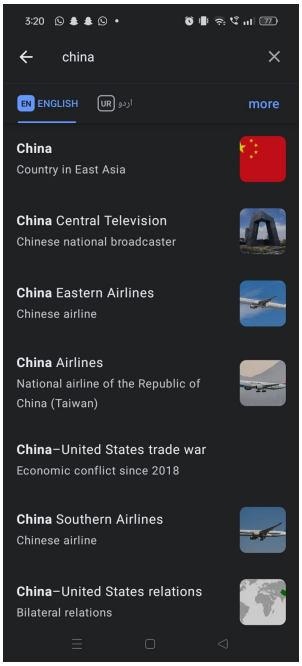

What I did
With airplane mode on I searched for Pakistan and then china.

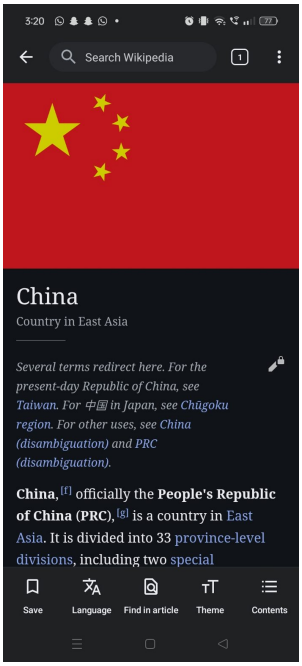

What I expected
A clear message and no crash.

What happened
Both searches showed "Cannot connect to internet" with a Retry button. The app did not crash. The line below it says "Unable to resolve host", which is technical and an ordinary user may not understand it.

Result: Pass with note

TC-WK-25 Back online again

What I did
I turned airplane mode off and searched china again.

What I expected
The app should work again without a restart.

What happened
The results came back and the China article opened. I did not restart the app.

Result: Pass

TC-WK-26 Send the app to the background

What I did
I left the app with the phone buttons, used another app for a short time, then opened Wikipedia again from recent apps.

What I expected
The app should come back and not crash.

What happened
It came back on the same Karachi article (the Contents list from the Contents test was open on top). I did not take a screenshot before leaving, so I cannot say if the scroll position stayed the same.

Result: Pass with note

Things I noticed

None of these stopped the app from working. I listed them because a real user might meet them.

Grey boxes while pictures load	On a few pages a grey box showed first and the picture came later (Pakistan Army in search, a photo at the top of one article). At least once it fixed itself after a moment.
Preview card	The button words overlap the text behind them and a spinning circle shows for a while.
No message after saving	Only the bookmark icon changes. A short "Saved" message would help new users.
Red dot on tabs	The red dot on Saved and Activity stayed even after I opened both tabs.
Offline error text	The line "Unable to resolve host" is hard for a normal user.
Find in article	When nothing matches, there is only a red 0/0 and no written message.
Long search text	The results for my long sentence did not look related to it.
Landscape	Very little space to read because both bars stay on the screen.

What I did not test

I want to be clear about the limits of this test.

- Logging in, creating an account and anything inside Activity
- Editing a page and donating (I stayed away from these on purpose)
- Games and Places
- Tapping a section in Contents to jump to it
- Closing the search widget pop up and checking if it returns
- Scroll position after coming back from the background
- Other languages apart from English and Urdu
- Slow internet and low battery

What I learned

This was my first time testing a mobile app. Three things were new to me. First, the phone itself is part of the test, so rotation, airplane mode and the Back button matter as much as the buttons inside the app. Second, a test can be half done. I did not tap a section in Contents and I did not log in, so I wrote that down and did not call those tests passed. Third, a small thing like a grey box or a missing message is worth a note even when it is not a bug.

Next I want to test a shopping app and a notes app, because they save data and I can check that the data stays after I close the app.
