Google Keep Android App

Manual Test Report

Tester	Aqsa Shoukat
App	Google Keep (by Google LLC), installed from the Play Store
App version	Not recorded
Phone	Oppo A3 with Android 14
When	October 2026
Type of testing	Manual and exploratory, done by hand on my own phone
Account	Signed in with my own Google account. Only test text was written in the notes.

About this test

After the Wikipedia app I wanted an app that saves my own data, because then I can check that the data is kept. A notes app is good for that. I picked Google Keep. I made notes, changed them, deleted them, searched for them and then closed the app to see if they stayed.

Every test below has the screenshot from my phone, what I did, what I expected and what happened. I kept the clock visible in the screenshots. I only wrote test text in the notes and nothing personal.

This is a public app that is not mine. I tested it only the way a normal user would use it.

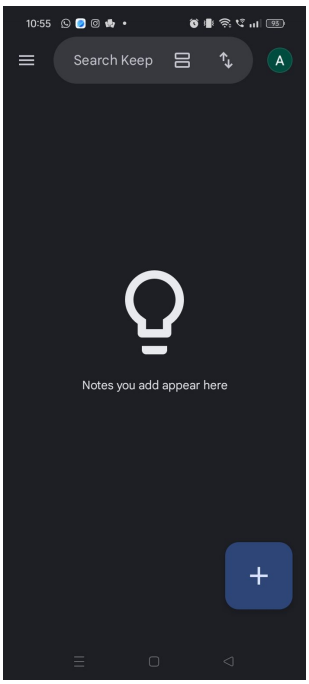

Result in short

Total tests	**12**
Pass	**10**
Pass with a note	**2**
Partly tested or not fully tested	**0**
Real bugs found	**0**

I did not find a real bug in the parts I could test. Keep worked well in every test I did. Two things in my own work could be better and I wrote them on the last pages, so I do not hide them.

Creating notes

TC-GK-01 Main screen with no notes

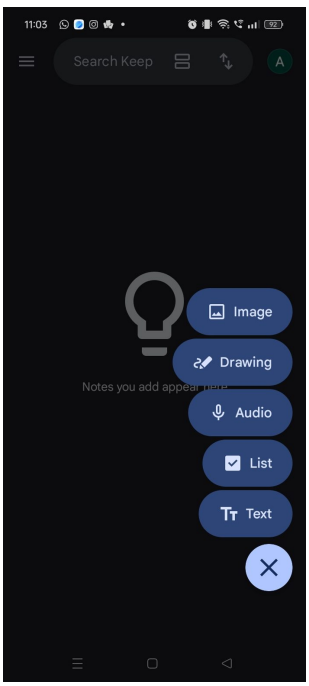

What I did
I opened the app for the first time after signing in.

What I expected
The app should tell me that there are no notes yet.

What happened
The screen shows a bulb and the words "Notes you add appear here". At the top there is a search box, a button to switch between list and grid, a sort button and my account icon.

Result: Pass

TC-GK-02 The plus button

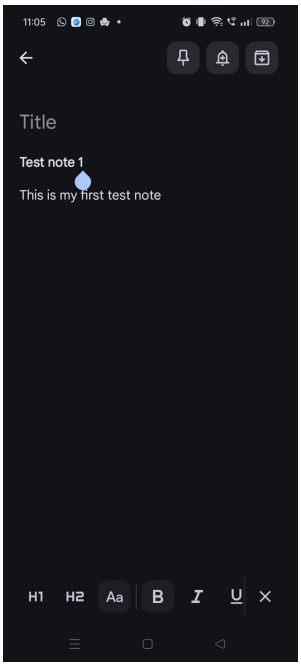

What I did
I tapped the plus button on the main screen.

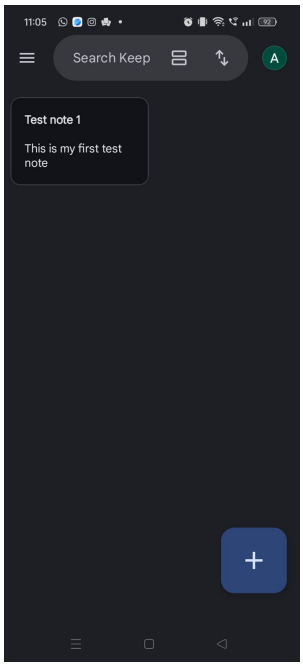

What I expected
A way to choose what kind of note to make.

What happened
Five choices came up: Image, Drawing, Audio, List and Text. I only tested Text in this report.

Result: Pass

TC-GK-03 Make a text note

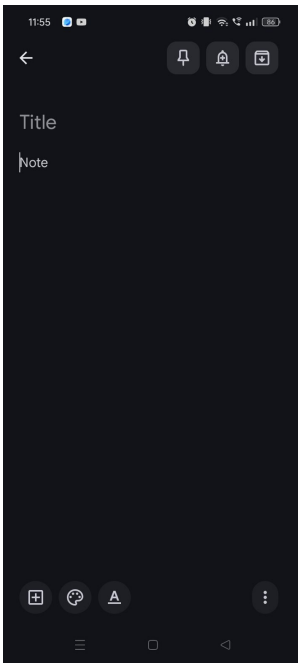

What I did
I chose Text and typed Test note 1 and then the line This is my first test note. Then I pressed Back.

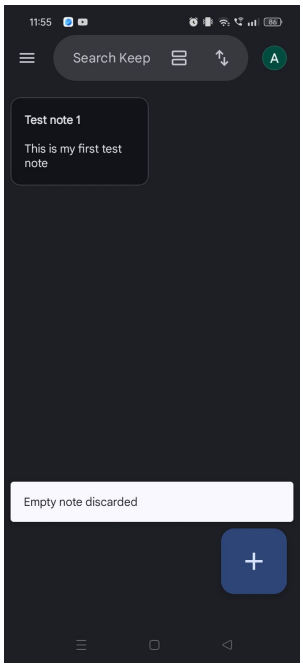

What I expected
The note should be saved without a Save button and show on the main screen.

What happened
The note showed up as a card on the main screen with both lines. There is no Save button, the app keeps the note by itself. On the note screen the Title box looks empty and Test note 1 sits in the text area in bold, but on the card it looks like a heading. I am not sure why it looks like that.

Result: Pass with note

TC-GK-04 Empty note

What I did
I made a new note, wrote nothing and pressed Back.

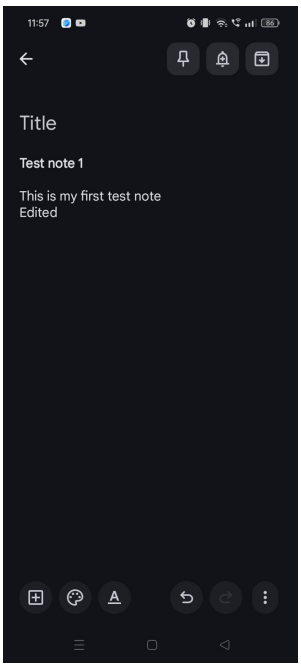

What I expected
The app should not keep an empty card.

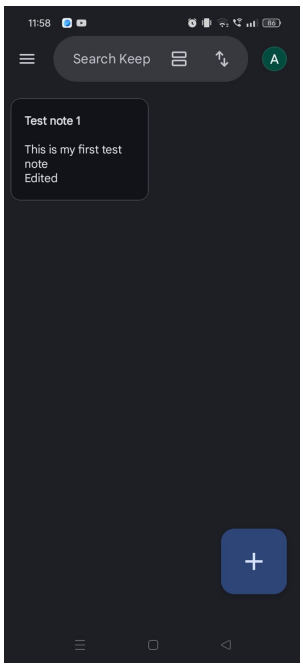

What happened
The app showed a message that says "Empty note discarded" and no empty card was made. I like that it tells the user what happened.

Result: Pass

Changing and deleting notes

TC-GK-05 Edit a note

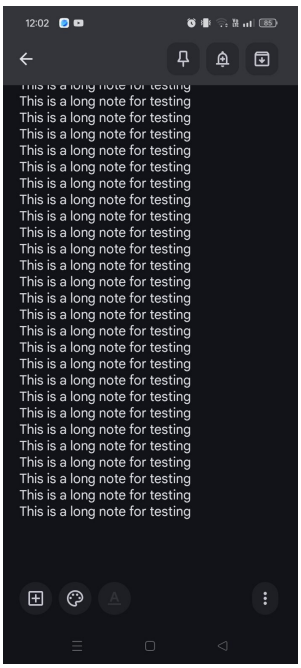

What I did
I opened Test note 1 and typed the word Edited on a new line. Then I pressed Back.

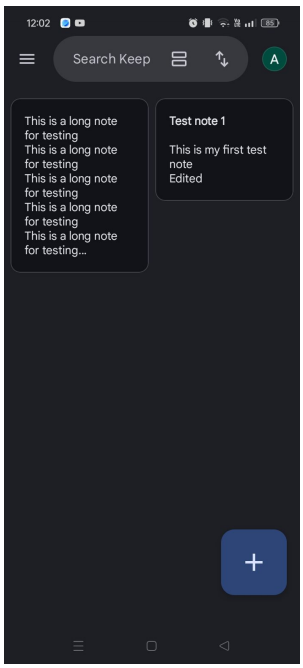

What I expected
The new text should be saved.

What happened
The card on the main screen shows the word Edited. The edit screen also has Undo and Redo buttons.

Result: Pass

TC-GK-06 Very long note

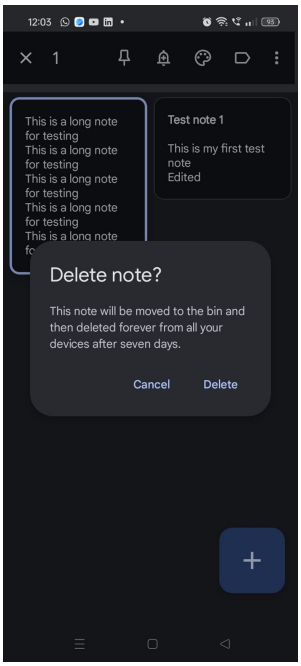

What I did
I pasted the line This is a long note for testing again and again until the note had about 30 lines.

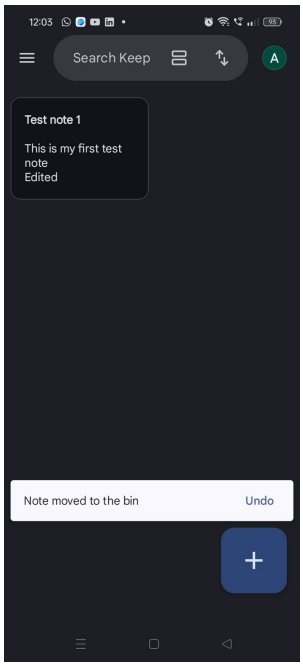

What I expected
The note should keep all the lines and the card should not fill the screen.

What happened
I scrolled to the bottom and all the lines were there. On the main screen the card shows the first five lines and ends with three dots, so it does not take the whole screen.

Result: Pass

TC-GK-07 Delete a note

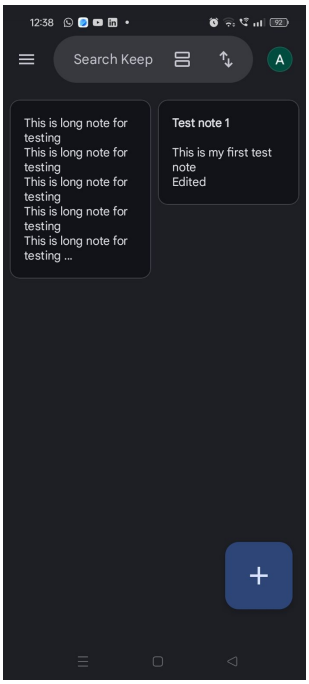

What I did
I pressed and held the long note, opened the menu and chose Delete.

What I expected
The app should ask before deleting.

What happened
A box asked "Delete note?" and said the note goes to the bin and is deleted for good after seven days. After I pressed Delete the card was gone and a message at the bottom said "Note moved to the bin" with an Undo button.

Result: Pass

TC-GK-08 Undo a delete

What I did
I deleted a note and pressed Undo.

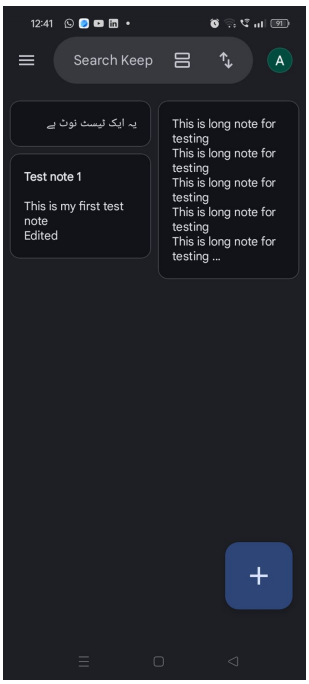

What I expected
The note should come back.

What happened
The note came back on the main screen. I did not take a screenshot of the Undo message, so the screenshot only shows the result.

Result: Pass with note

Search and language

TC-GK-09 Note in Urdu

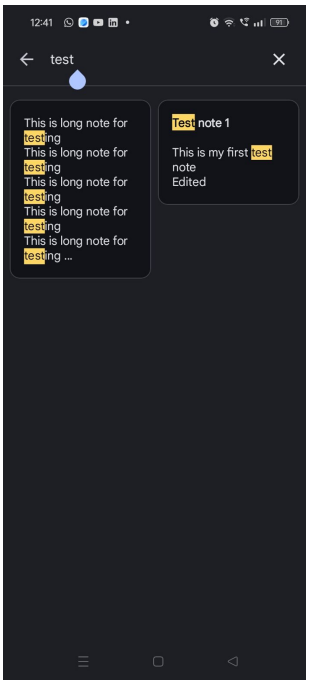

What I did
I made a new note and typed one Urdu sentence.

What I expected
The Urdu should show correctly and read from right to left.

What happened
The card shows the Urdu sentence on the right side, while the English notes sit on the left. The letters joined correctly. This note has no title, so the card is small.

Result: Pass

TC-GK-10 Search that finds notes

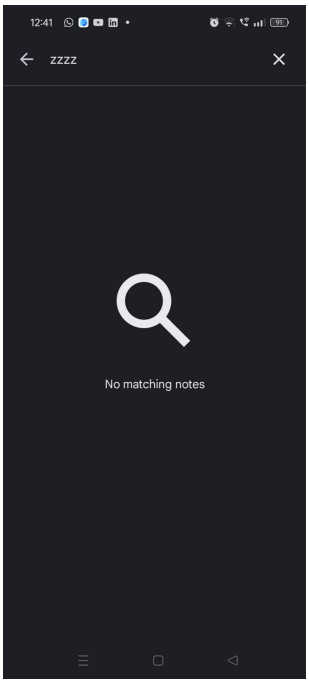

What I did
I typed test in the Search Keep box.

What I expected
The notes with that word should show up.

What happened
Both English notes were found and the word was marked in yellow. It found Test with a capital T and also the first part of the word testing. The Urdu note did not show up, which is right because it does not have the word.

Result: Pass

TC-GK-11 Search that finds nothing

What I did
I typed zzzz in the search box.

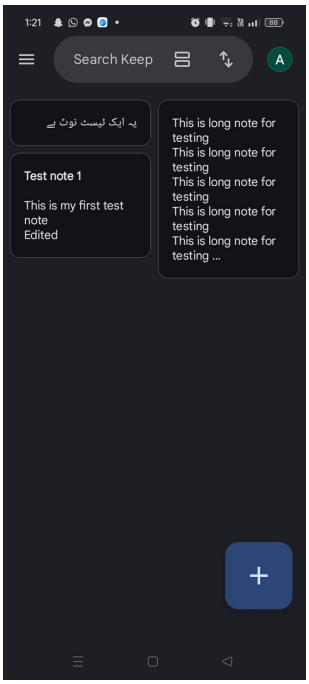

What I expected
A clear message that nothing matches.

What happened
The screen shows a magnifying glass and the words "No matching notes".

Result: Pass

After closing the app

TC-GK-12 Close the app and open it again

What I did
I swiped Keep away from the recent apps list and opened it again.

What I expected
All my notes should still be there.

What happened
All three notes were still on the main screen, the Urdu note, the long note and Test note 1 with the word Edited.

Result: Pass

Things I noticed

These are small points from my testing. None of them stopped the app from working.

Title box	On my first note the Title box looks empty even though the card shows a heading. I could not explain why, and I did not test the title box more.
Undo message	I forgot to take a screenshot of the Undo message. I should take the before and after screenshots every time.
Good points	The app tells the user what happens: the empty note message, the delete box with the seven days and the Undo button. Search shows a clear message when nothing is found.
Long note card	The card only shows five lines and three dots. That is fine, but a very long note makes the user open it to read more.

What I did not test

I want to be clear about the limits of this test.

- Images, drawings, audio notes and lists
- Reminders, labels, colours and pinning
- Archive and getting a note back from the bin
- Using the app without internet and syncing between two phones
- Rotating the phone and sending the app to the background
- Very large notes with thousands of lines
- Special characters and emoji in notes
- Signing out and signing in again

What I learned

A notes app showed me a new kind of test. It is not enough that a note shows on the screen. I also have to check that it is still there after I close the app and open it again. I also saw that a good app tells the user what is going on, like the messages for the empty note and for the delete. My own lesson is to take a before and after screenshot for every test, because I missed one for Undo.

Next I want to test a shopping app, because it has a cart, prices and a checkout.
