Mobile Test Report

CURA Healthcare Service (demo website)

Tester	Aqsa Shoukat
Date	16 October 2026
Website	https://katalon-demo-cura.herokuapp.com/
Device	Android phone, tested in the phone browser (portrait mode)
Type of testing	Manual exploratory testing. I used the site like a real user would.
Demo login	Username John Doe (the demo account shown on the login page)

1. What I tested

I opened the site on my phone and tried the main things a patient would do: look at the home page, open the menu, tap the contact details, log in, and book an appointment. I also tried wrong and empty inputs to see how the site reacts.

2. Short summary

The main flow works. I could log in and book an appointment, and the confirmation page showed the same details I entered. But I found one real problem: the site lets me book a visit in the past. I also found some layout problems on the phone and a few small things that could be better.

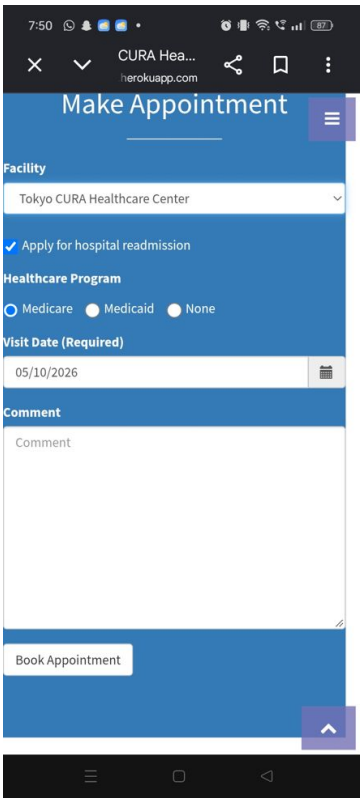

ID	Issue	Severity
CURA-01	Past date can be booked	Medium
CURA-02	Page is wider than the phone screen (white strip, cut labels)	Low-Medium
CURA-03	Enter key does not log me in	Low-Medium
CURA-04	Menu text overlaps the big title	Low
CURA-05	Social media icons open nothing	Low
CURA-06	Phone number is not tappable	Low
CURA-07	Same error for empty and wrong login, fields get cleared	Low
CURA-08	Blue tagline is hard to read on the photo	Low
CURA-09	Confirmation page labels break into many short lines	Low
CURA-10	Go to Homepage opens the Make Appointment page	Low

Severity is my own opinion. Medium = could cause wrong data. Low = small or looks bad but does not stop the user.

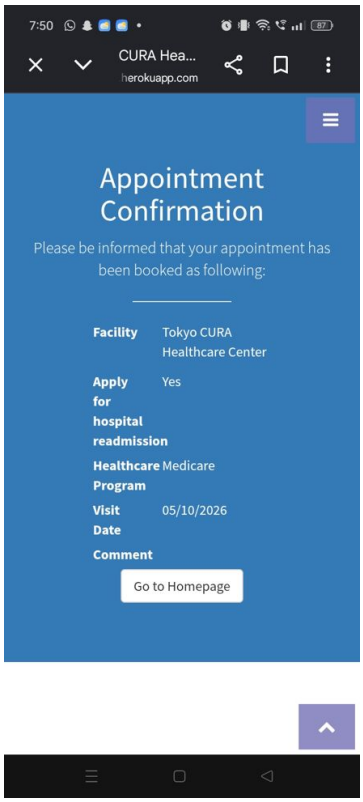

3. Problems I found

CURA-01 - Past date can be booked [Medium]

Steps	Log in. Open Make Appointment. Pick an old date from the calendar (05/10/2026, earlier in the same month). Tap Book Appointment.
Expected	The site should not allow a date that has already passed, or it should show an error.
Actual	The booking was accepted. The confirmation page says my appointment is booked for 05/10/2026.
Why it matters	A hospital cannot give an appointment in the past. This can save wrong data.

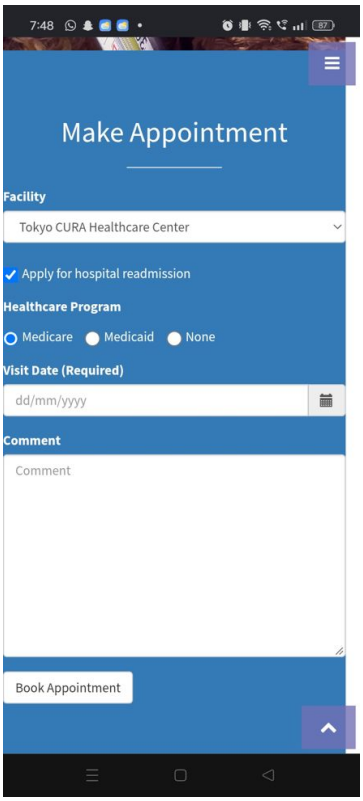

Old date picked in the form

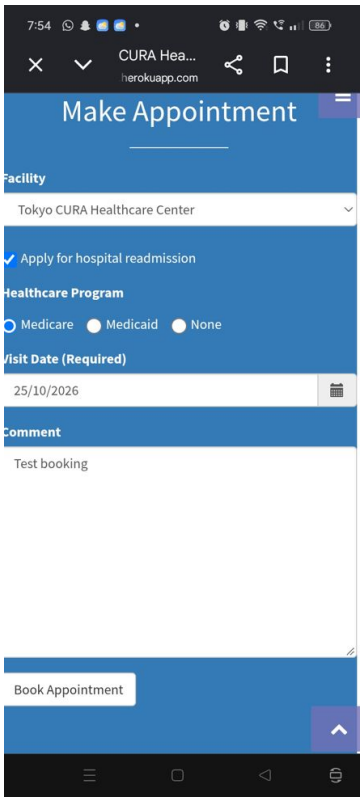

Confirmation page with the old date

CURA-02 - Page is wider than the phone screen [Low-Medium]

Steps	Log in and open the Make Appointment page on the phone. Look at the right and left edges.
Expected	The page should fit the screen with a small space on both sides.
Actual	A white strip shows on the right side. In another screenshot the page moved left and the first letters of the labels were cut ("acility", "isit Date", "omment"). The fields also touch the screen edges.
Note	It looks like the page slides sideways a little on the phone.

White strip on the right

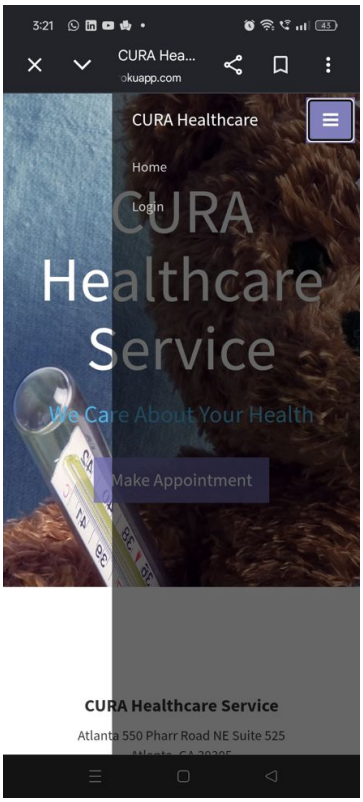

Labels cut on the left

CURA-03 - Enter key does not log me in [Low-Medium]

Steps	Open the login page. Type the demo username and password. Press Enter on the keyboard.
Expected	I should be logged in, same as when I tap the Login button.
Actual	Nothing happened. I was not logged in.
Note	I did not take a screenshot for this one. Tapping the Login button works fine.

CURA-04 - Menu text overlaps the big title [Low]

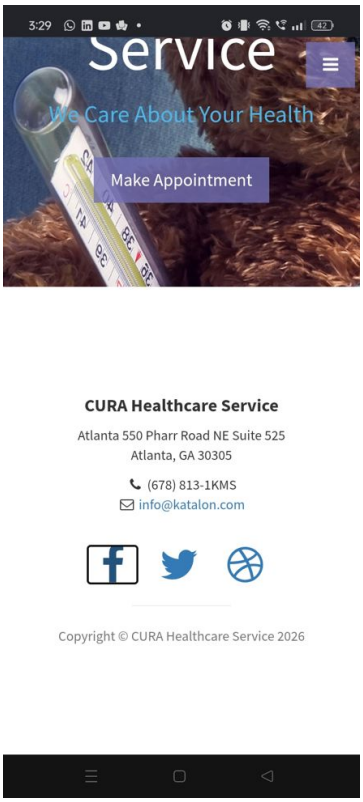

Steps	On the home page tap the three-line menu button at the top right.
Expected	A clean menu with Home and Login.
Actual	The menu opens, but the words Home and Login sit on top of the big CURA title. Also, only the right half of the screen gets dark and the left half stays white.

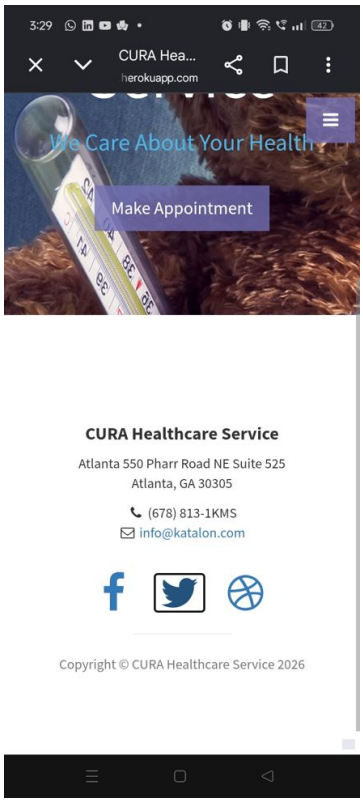

Menu open on the home page

CURA-05 - Social media icons open nothing [Low]

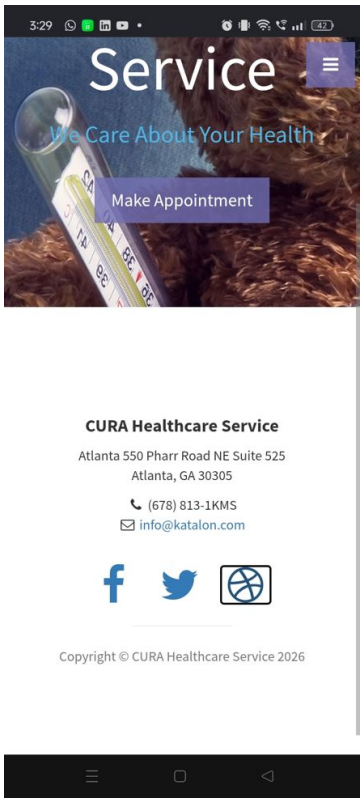

Steps	Scroll to the bottom. Tap the Facebook, Twitter and Dribbble icons one by one.
Expected	Each icon opens its social page.
Actual	Nothing opened. The page only moved up a little. A black box showed around the icon I tapped.

Facebook icon tapped

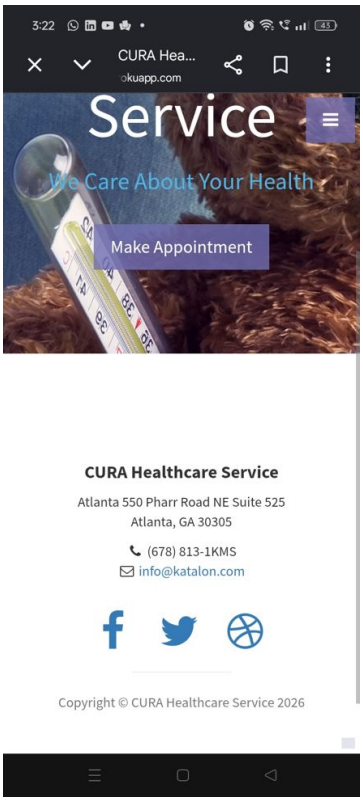

Twitter icon tapped

Dribbble icon tapped

CURA-06 - Phone number is not tappable [Low]

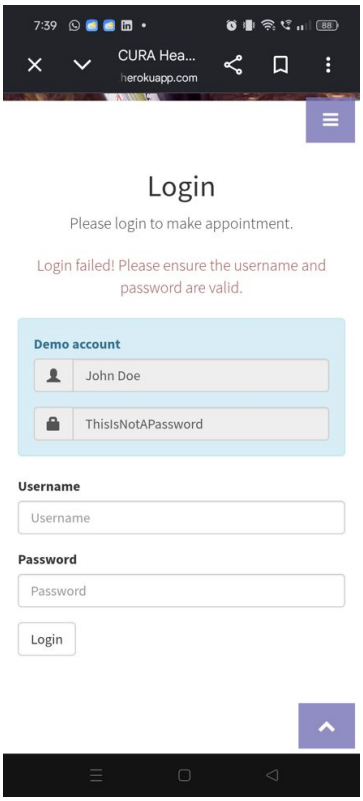

Steps	Scroll to the bottom. Tap the phone number.
Expected	On a phone, I would expect a call option to open.
Actual	Nothing happened. The email address next to it does open the mail app, so the two behave differently.
Note	This is an observation. It is not a big problem.

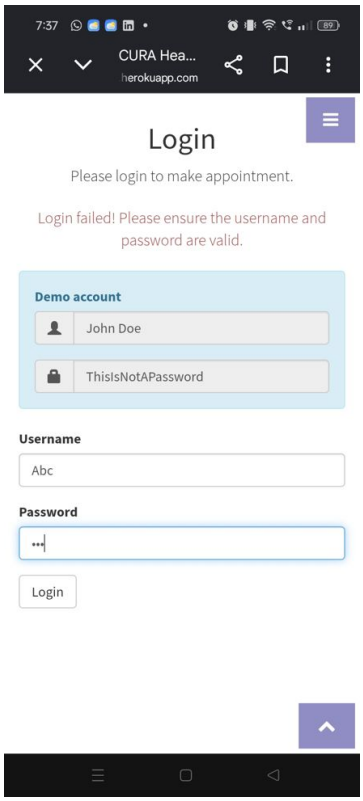

Footer with phone and email

CURA-07 - Same error for empty and wrong login, and fields get cleared [Low]

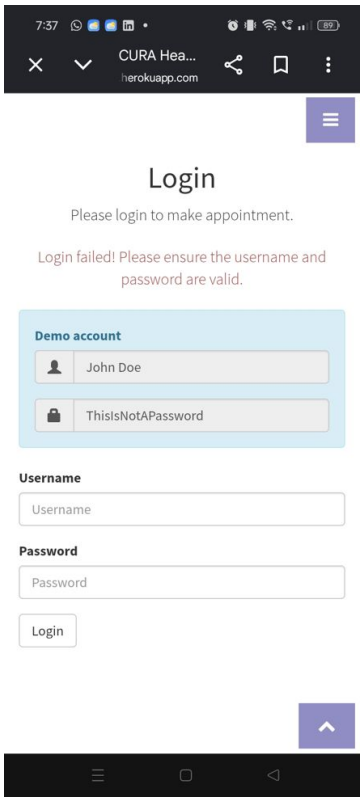

Steps	Test A: leave both fields empty and tap Login. Test B: type only a username and tap Login. Test C: type a wrong username and a wrong password and tap Login.
Expected	For empty fields I would expect a message like "Username is required". The typed username should stay in the box.
Actual	All three tests show the same message: "Login failed! Please ensure the username and password are valid." After the error both fields are empty again.
Note	Clearing the password is normal. Clearing the username is a small problem on a phone because I have to type it again.

Both fields empty

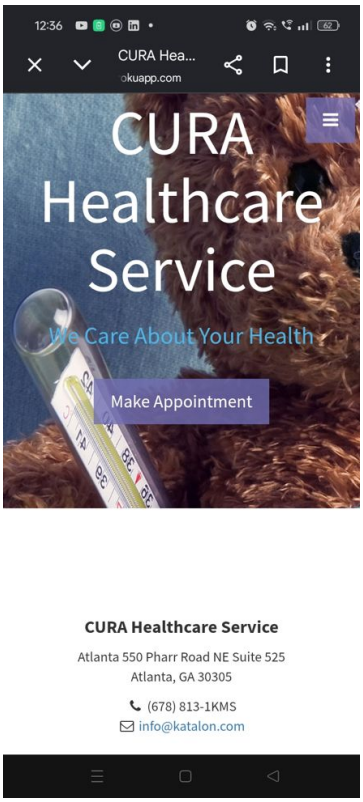

Wrong username and password

Fields empty after the error

CURA-08 - Blue tagline is hard to read [Low]

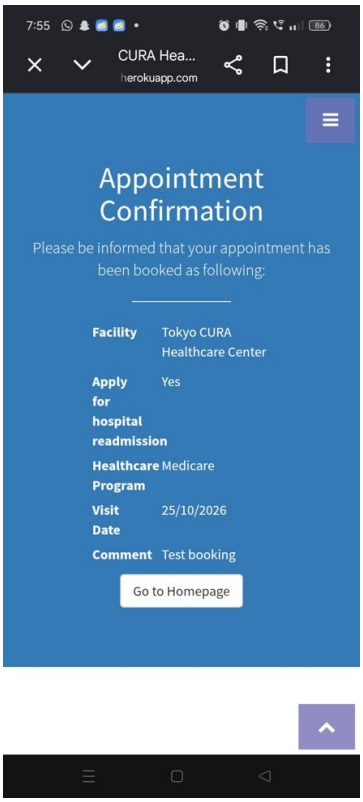

Steps	Look at the home page on the phone.
Expected	The text "We Care About Your Health" should be easy to read.
Actual	The light blue text sits on a busy photo. It is hard to read, especially outside in sunlight.

Home page

CURA-09 - Confirmation page labels break into many lines [Low]

Steps	Book an appointment and look at the confirmation page.
Expected	Labels should be easy to read.
Actual	The label column is very narrow. For example "Apply for hospital readmission" is split into four short lines.

Confirmation page

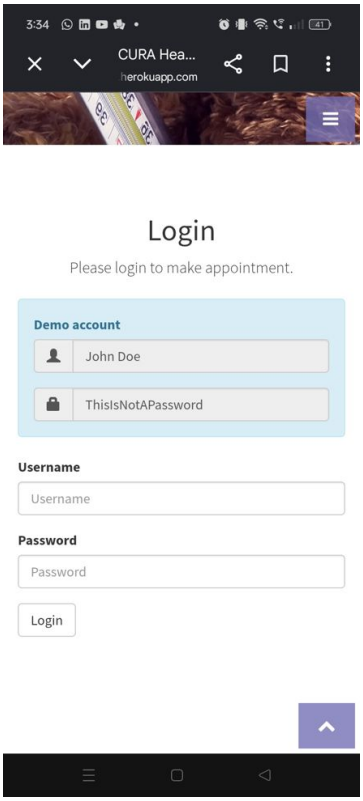

CURA-10 - Go to Homepage opens the Make Appointment page [Low]

Steps	On the confirmation page tap Go to Homepage.
Expected	The home page with the teddy bear picture opens.
Actual	The Make Appointment page opened.
Note	Maybe this is because I was already logged in. I am not sure, so I am writing it as an observation.

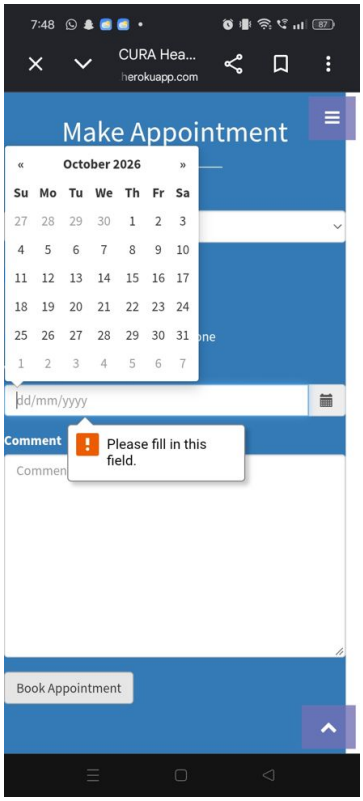

4. Things that worked well

- Demo login with the correct username and password works and opens the appointment form.
- The login error does not say which one is wrong (username or password). That is a good practice for security.
- The password is hidden with dots while typing.
- If Visit Date is empty, the site shows "Please fill in this field." and does not book.

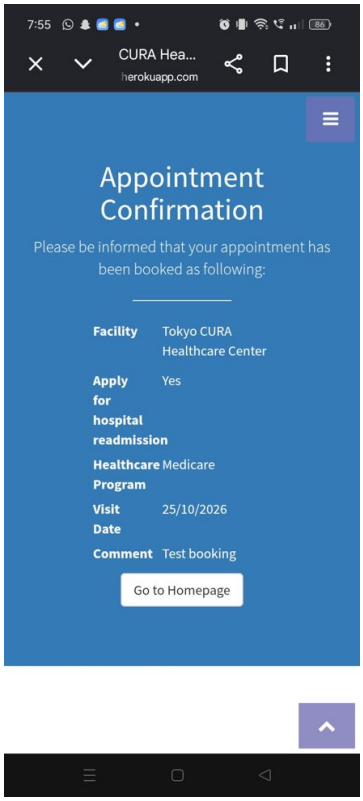

- A correct booking works. The confirmation page shows the same facility, program, date and comment that I entered.
- The email link opens the mail app with the address already filled in.
- The arrow button at the bottom right takes the page back to the top.

Login page

Empty date message

Correct booking confirmed

5. What I did not test

- Landscape mode. My phone screen did not rotate, so I could not check it.
- Other facilities in the dropdown, and the Medicaid and None options.
- Other phones and other browsers. I used one phone and one browser only.
- Very long comments or special characters in the comment box.

6. What I learned

Phone testing showed me problems I would not see on a computer, like the page width and the tap behaviour. Next time I will also test landscape mode and more than one browser.

All testing was done by me manually on my phone. I used AI to help format this document.
