About This Portfolio

This portfolio documents **seven (7) software bugs** discovered during manual testing of the **Buggy Cars Rating** web application — a practice platform for QA trainees. Each bug was logged in **Jira (Atlassian)** following professional bug-reporting standards, including reproduction steps, expected vs. actual results, severity classification, and environment details.

The bugs span real-world issue categories: input validation, mobile UI/UX accessibility, session management, error messaging, and content moderation — demonstrating broad functional test coverage.

Bug Summary Table

ID	Bug Title	Severity	Priority	Status
BCBT-1	Abusive Content Allowed in Comment Field	High	High	To Do
BCBT-2	Comment Input Box Missing from Car Detail Page	High	High	To Do
BCBT-3	Register Button Hidden When Mobile Keyboard is Open	Medium	Medium	To Do
BCBT-4	Technical Error Message Shown on Duplicate Registration	Medium	Medium	To Do
BCBT-5	Registration Form Visible After Successful Login	Medium	Medium	To Do
BCBT-6	Login Field Label is Misleading on Registration Page	Low	Low	To Do
BCBT-7	Single Character Accepted as Valid Comment	Low	Low	To Do

Detailed Bug Reports

BCBT-1

HIGH

Abusive Content Allowed in Comment Field

Steps to Reproduce:

1. Login to Buggy Cars Rating

2. Open any car page

3. Type abusive words in the comment field

4. Click Submit

Expected Result	Actual Result
System should reject abusive content and show an appropriate error message.	Abusive content is accepted and posted as a valid comment without any filtering.

Status	Priority	Environment
To Do	High	Web Browser (Chrome)

BCBT-2

HIGH

Comment Input Box Missing from Car Detail Page

Steps to Reproduce:

1. Login to Buggy Cars Rating

2. Navigate to any car detail page

3. Scroll to the comment section

Expected Result	Actual Result
A comment input box should be visible and accessible to logged-in users.	The comment input box is missing — users cannot post comments.

Status	Priority	Environment
To Do	High	Web Browser

BCBT-3

MEDIUM

Register Button Hidden When Mobile Keyboard is Open

Steps to Reproduce:

- 1. Open Buggy Cars Rating on mobile
- 2. Navigate to Registration page
- 3. Tap any input field (keyboard opens)
- 4. Try to locate the Register button

Expected Result	Actual Result
Register button should remain visible even when mobile keyboard is open.	Register button is pushed off-screen and hidden behind the mobile keyboard.

Status	Priority	Environment
To Do	Medium	Mobile Browser (Android)

BCBT-4

MEDIUM

Technical Error Message Shown on Duplicate Registration

Steps to Reproduce:

- 1. Navigate to Registration page
- 2. Enter an already-registered email
- 3. Fill other fields and click Register

Expected Result	Actual Result
A user-friendly message: 'This email is already registered. Please use a different one.'	A raw technical error message is displayed — confusing and unprofessional.

Status	Priority	Environment
To Do	Medium	Web Browser

BCBT-5

MEDIUM

Registration Form Visible After Successful Login

Steps to Reproduce:

- 1. Login with valid credentials
- 2. After login, navigate to Registration page via URL

Expected Result	Actual Result
Logged-in users should be redirected away from the Registration page.	Registration form is fully accessible to already logged-in users — no redirect.

Status	Priority	Environment
To Do	Medium	Web Browser

BCBT-6

LOW

Login Field Label is Misleading on Registration Page

Steps to Reproduce:

- 1. Navigate to the Registration page
- 2. Observe the labels on the input fields

Expected Result	Actual Result
Field labels should be clear and accurate for a Registration form.	A field on Registration page uses a login-specific label, causing user confusion.

Status	Priority	Environment
To Do	Low	Web Browser

BCBT-7

LOW

Single Character Accepted as Valid Comment

Steps to Reproduce:

- 1. Login to Buggy Cars Rating
- 2. Open any car page
- 3. Type single character 'c' in comment field
- 4. Click Submit

Expected Result	Actual Result
Minimum comment length should be enforced (at least 5 characters).	Single character 'c' is accepted and posted as a valid comment — no validation.

Status	Priority	Environment
To Do	Low	Web Browser

Testing Skills & Tools Used

Category	Details
Testing Type	Manual Functional Testing, Exploratory Testing, UI/UX Testing
Bug Tracking Tool	Jira (Atlassian) — Bug creation, tracking, and management
Application Tested	Buggy Cars Rating (Web Application)
Test Coverage	Input Validation, Session Management, Mobile Responsiveness, Error Messages, Content Moderation
Severity Levels	Low / Medium / High / Critical
Environment	Web Browser — Desktop & Mobile
Documentation	Steps to Reproduce, Expected vs Actual Results, Severity & Priority fields

This portfolio was prepared as part of my journey into Software Quality Assurance. All bugs were discovered through manual testing of a publicly available practice application and reported using industry-standard templates in Jira.
