Daraz Shopping App

Manual Test Report

Tester	Aqsa Shoukat
App	Daraz Online Shopping App (by Daraz Mobile), installed from the Play Store
App version	Not recorded
Phone	Oppo A3 with Android 14
When	October 2026
Type of testing	Manual and exploratory, done by hand on my own phone
Account	Not logged in. I used the app as a visitor and I did not place any order.

About this test

I wanted to test a shopping app, because it has search, prices and a cart. The Sauce Labs demo shop app would not install on my phone. Google Play Protect blocked it and the install failed on Android 14. So I tested Daraz, a real shop that many people in Pakistan use.

Because Daraz is a real company, I set strict limits. I did not log in, I did not sign up, I did not place an order and I did not type any personal details. I only did what a visitor can do: look at the pages, search, open products and look at the options. Because of this I could not test the cart itself, and I say so in the report.

Every test below has the screenshot from my phone, what I did, what I expected and what happened. I kept the clock visible. I cropped some screenshots to hide parts that are not needed.

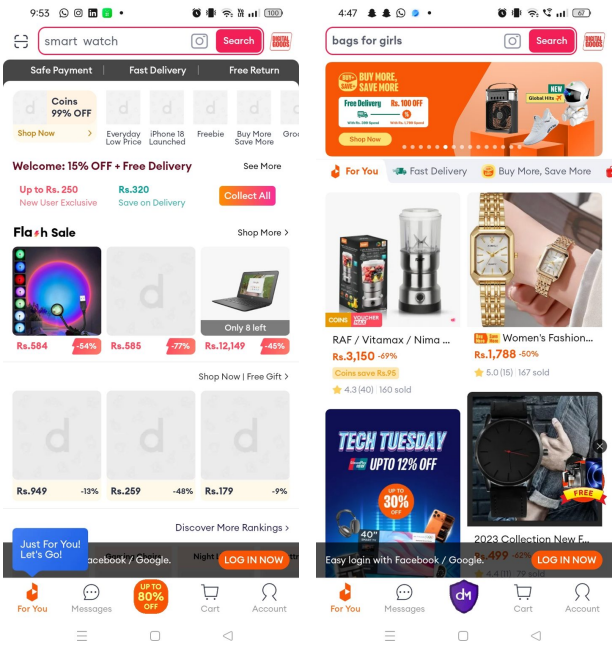

Result in short

Total tests	**14**
Pass	**4**
Pass with a note	**10**
Partly tested or not fully tested	**0**
Real bugs found	**0**

I did not find a real bug in the parts I could test. I wrote down several small things a user could trip over. I could not test the cart because it needs a login, so this report covers only the visitor side of the app.

Home and search

TC-DZ-01 Home screen

What I did

I opened the app and looked at the Home screen without logging in.

What I expected

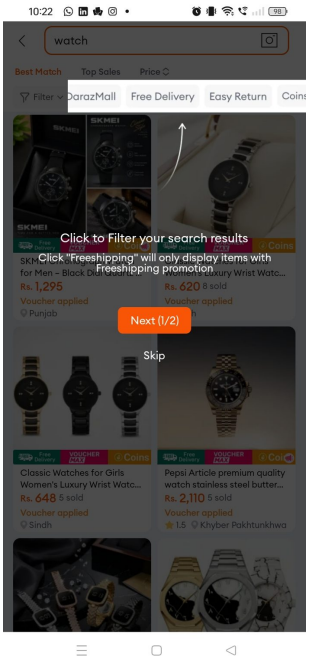

The shop front should load with pictures, offers and the bottom menu.

What happened

The page loaded with the search box, a strip that says Safe Payment, Fast Delivery and Free Return, a Flash Sale and prices. Many boxes showed a grey tile with the letter d while the pictures were still loading. At the bottom there is a LOG IN NOW button and a bar that offers login with Facebook or Google. On the For You page this bar covers part of a product at the bottom. I did not tap Log in or Collect All.

Result: Pass with note

TC-DZ-02 First search and the tutorial

What I did

I searched for watch. This was my first search in the app.

What I expected

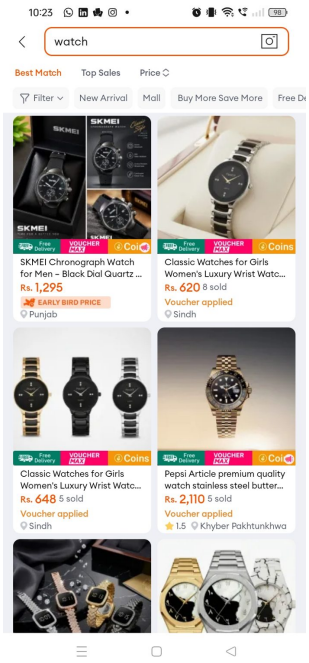

The results should show and nothing should block them.

What happened

A tutorial layer came up that says "Click to Filter your search results" with Next and Skip buttons. Its text sits on top of the product titles, so both are hard to read.

Result: Pass with note

TC-DZ-03 Search for a normal word

What I did

I looked at the watch results after closing the tutorial.

What I expected

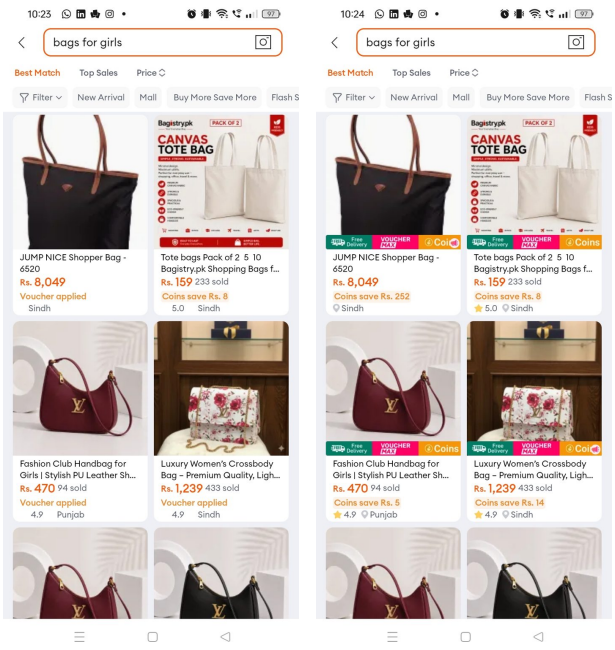

Watches should be listed with picture, name and price.

What happened

The list shows picture, name, price, Free Delivery and Voucher labels, how many were sold and the province. There are buttons for Best Match, Top Sales, Price and Filter.

Result: Pass

TC-DZ-04 Labels that load late

What I did

I searched for bags for girls and looked at the page a few seconds apart.

What I expected

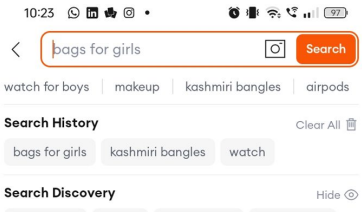

The product cards should look the same each time.

What happened

The first look had no rating stars and no location icons. A moment later the icons came and a line like "Coins save Rs. 252" showed up. The page finished loading by itself.

Result: Pass with note

TC-DZ-05 Search history

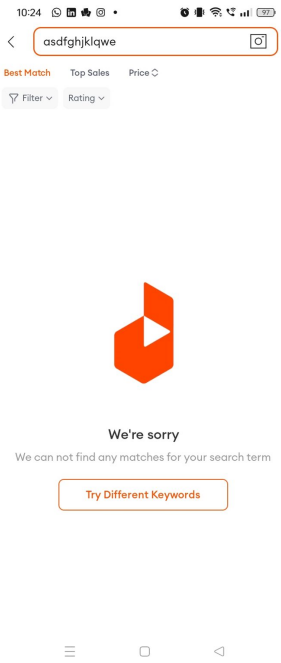

What I did
I tapped the search box again.

What I expected
My earlier searches should be kept.

What happened
Search History lists my earlier searches (asdfghjklqwe, bags for girls, kashmiri bangles and watch) and there is a Clear All button. I did not press it. I cropped the screenshot above the suggestions list.

Result: Pass

TC-DZ-06 Word that means nothing

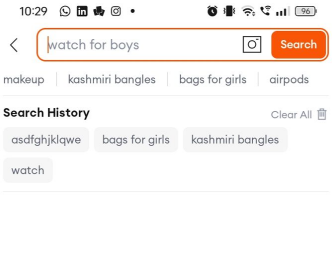

What I did
I searched for asdfghjklqwe.

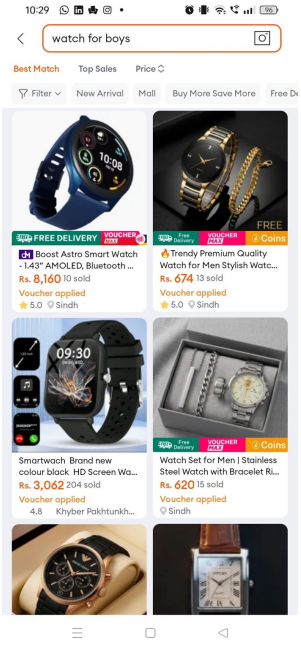

What I expected
A clear message that nothing was found.

What happened
The page says "We're sorry. We can not find any matches for your search term" and has a Try Different Keywords button. The app did not stop.

Result: Pass

TC-DZ-07 Empty search

What I did
I left the search box empty and pressed Search.

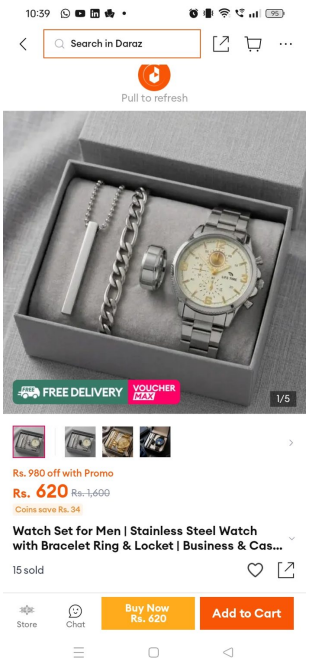

What I expected
No crash. A message or no change.

What happened
The box was empty but showed a grey suggestion (watch for boys). When I pressed Search, the app searched for that suggestion and listed watches. The suggestion also changes between visits, it was airpods before. A user may not expect a search for words they did not type.

Result: Pass with note

The product page

TC-DZ-08 Product page

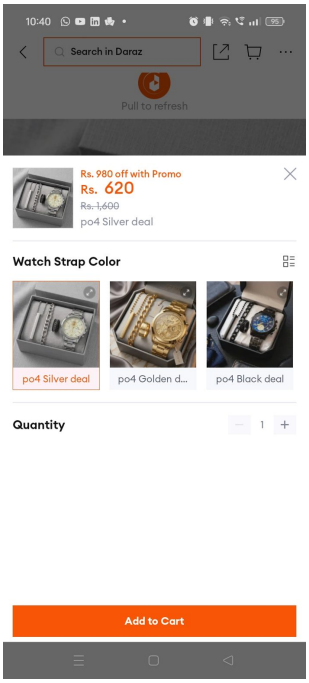

What I did
I opened the Watch Set for Men from the results.

What I expected
Picture, price and a way to add it to the cart.

What happened
The page shows five pictures, the price Rs. 620, the old price Rs. 1,600 crossed out and "Rs. 980 off with Promo". Buy Now and Add to Cart buttons are at the bottom. The price and the discount match the search list (1,600 minus 620 is 980). The words "Pull to refresh" showed at the top even though I had not pulled the page. I did not press Buy Now.

Result: Pass with note

TC-DZ-09 Option and quantity panel

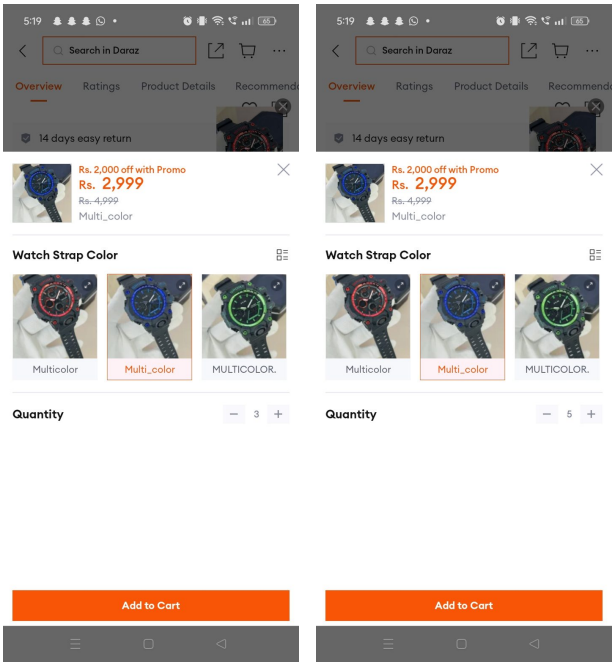

What I did
I pressed Add to Cart on a watch page.

What I expected
I expected to choose an option first.

What happened
A panel came up from the bottom with the options, the quantity and an Add to Cart button. The quantity started at 1 and the minus button was grey, so I cannot go below 1. The panel heading says Watch Strap Color, but the choices are whole watch sets, so the heading does not fit.

Result: Pass with note

TC-DZ-10 Change option and quantity

What I did
I picked the blue watch and pressed the plus button until the quantity was 3 and then 5.

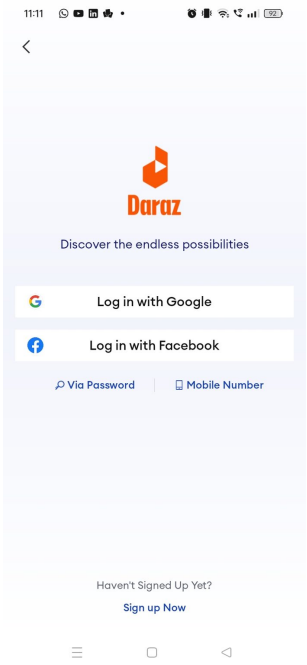

What I expected
The picture and the quantity should change.

What happened
The small picture changed to the blue watch and the quantity went to 3 and then to 5. The minus button became active. The price stayed Rs. 2,999 both times. I think it shows the price of one watch, but nothing says so and no total is shown. I did not press the Add to Cart button in the panel.

Result: Pass with note

Cart and login

TC-DZ-11 Add to Cart asks for login

What I did
I pressed Add to Cart on a heater page.

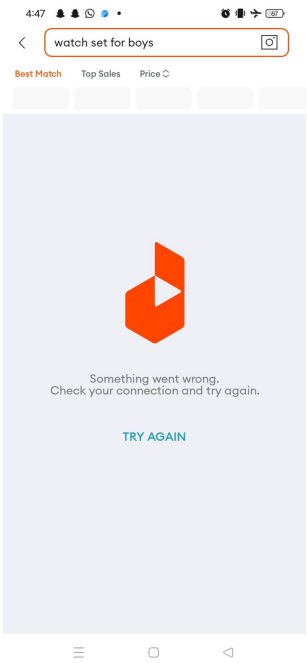

What I expected
The item goes in the cart, or the app asks me to log in first.

What happened
The app asked me to log in with Google, Facebook, a password or a mobile number. On the heater page there was no panel at all and the login page came straight away. On the watch pages the panel came first. I did not log in, because it is a real shop and I did not want to use my own details or place an order. So I could not test the cart.

Result: Pass with note

Phone related tests

TC-DZ-12 Airplane mode

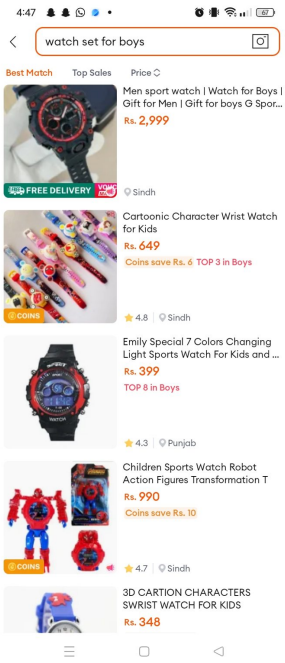

What I did
I turned on airplane mode and searched for watch set for boys.

What I expected
A clear message and no crash.

What happened
The page says "Something went wrong. Check your connection and try again." and has a TRY AGAIN button. The filter boxes at the top stayed empty and grey. The app did not crash. The message is simple, with no technical text.

Result: Pass with note

TC-DZ-13 Back online

What I did
I turned airplane mode off.

What I expected
The search should work again.

What happened
The results for watch set for boys came back. The list shows a picture on the left and the name and price on the right. I did not restart the app.

Result: Pass

TC-DZ-14 Rotate the phone

What I did
I turned on auto rotate and turned the phone sideways on the product page.

What I expected
The screen should turn, or stay the same on purpose.

What happened
The Daraz screen stayed upright. I do not know if the app only works upright on purpose. Earlier, Wikipedia turned on the same phone.

Result: Pass with note

Things I noticed

These are points from my testing. None of them stopped the app from working.

Grey boxes	Grey tiles with a letter d showed while pictures loaded, and some labels and icons came late. Everything finished loading by itself.
Tutorial layer	The first search shows a tutorial whose text sits on top of the product titles.
Empty search	The app searches for the grey suggestion when the box is empty. The suggestion changes between visits.
Panel heading	The panel is called Watch Strap Color but the choices are whole sets. It may be the seller's naming.
Price and quantity	The price stayed the same when I raised the quantity. It is not clear if it is the price of one item, and no total is shown.
Login to add to cart	The app needs a login to put anything in the cart. On two product pages the app behaved differently, one with a panel first and one with login straight away.
Login bar	The login bar at the bottom covers part of a product on the For You page.
Good points	The price and the discount matched between the list and the product page. The no results page and the airplane mode message are clear and simple, and the app recovered by itself.

What I did not test

I want to be clear about the limits of this test.

- Logging in, signing up and anything after the login
- The cart, checkout, payment and orders (I stayed away from these on purpose)
- Messages, Account, vouchers and coins
- Filters, sorting by price, the heart button, chat and image search
- Reviews and ratings on the product page
- Slow internet and a very long search text
- Why the screen did not rotate (I did not check the settings of the app)
- Other languages

What I learned

I learned that a plan can fail and that this is normal. The demo app did not install, so I picked another app and said why. I also learned to set my own limits on a real shop: no login, no order and no personal data. The most useful new thing for me was the price check. I compared the price and the discount between the search list and the product page, and they matched. I also saw that a test can stop at a login screen, and that writing this down honestly is better than going around it.

Next I want to write simple test cases from my notes for these three apps and to use a demo shop where I can log in and test the cart.
