

API TESTING REPORT

Tool: Mini Postman | Website: SauceDemo (saucedemo.com)

Tester: Aqsa Shoukat | BCS Graduate — BZU | September 2026

3 Test Cases	1 Passed (200)	2 Passed (404)	100% Pass Rate
--------------	----------------	----------------	----------------

What is API Testing?

API Testing verifies that web endpoints return correct responses. A status code of 200 means the server responded successfully. A status code of 404 means the requested page was not found — which is the expected and correct behavior for invalid URLs.

TC-API-01	GET Request — Valid URL (Homepage)	GET	PASS
-----------	------------------------------------	-----	------

Status Code: 200 OK	URL: https://www.saucedemo.com
---------------------	--------------------------------

Expected Result

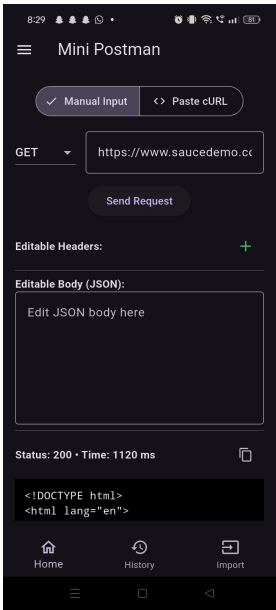

Status 200 OK — Website is accessible and responding

Actual Result

Status: 200 • Time: 1120 ms — HTML response received successfully

Analysis

The server returned HTTP 200, confirming the website is live and accessible. Response time was 1120ms and full HTML content was received.

TC-API-02	GET Request — Invalid URL (Non-existent Page)	GET	PASS
-----------	---	-----	------

Status Code: 404 Error	URL: https://www.saucedemo.com/fakepage
------------------------	---

Expected Result

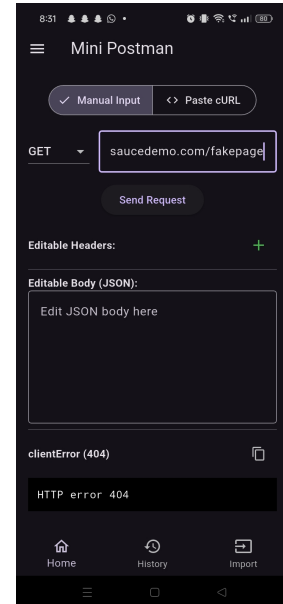

Status 404 — Page not found error for invalid endpoint

Actual Result

clientError (404) — HTTP error 404 returned correctly

Analysis

The server correctly returned HTTP 404 for a non-existent page. This confirms proper error handling for invalid endpoints.

TC-API-03

GET Request — Unauthorized Page (Inventory without Login)

GET

PASS

Status Code: 404
Error

URL: https://www.saucedemo.com/inventory

Expected Result

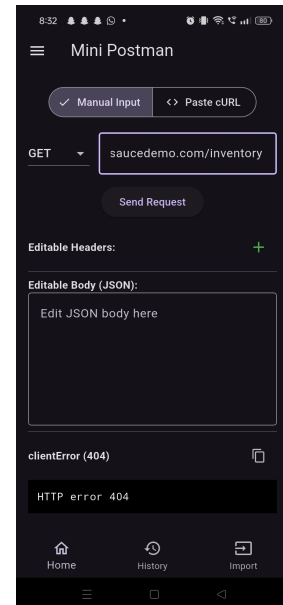

Status 404 — Direct access to inventory without authentication should be blocked

Actual Result

clientError (404) — HTTP error 404 returned correctly

Analysis

Attempting to access the inventory page directly via API (without login) correctly returned 404, confirming the application protects authenticated routes.

HTTP Status Codes Reference

Code	Meaning	When it appears
200	OK — Success	Page/endpoint exists and responded correctly
404	Not Found	Page doesn't exist or URL is wrong
401	Unauthorized	Login required to access this page
500	Internal Server Error	Server crashed or has a bug
