OrangeHRM
Manual Testing Report

Manual testing of the OrangeHRM demo website (HR system)

Prepared by	Aqsa Shoukat
Test date	17 October 2026
Platform	Android phone, mobile browser
Website	OrangeHRM open source demo (version shown on the page: OrangeHRM OS 5.9)
Scope	2 modules and 17 test cases
Result	12 passed, 1 failed and 4 observations
Evidence	Screenshots taken during testing

This report shows what I tested, what I saw on the screen and the problems I found. It is based on my test session and the screenshots I saved.

1. What I tested

OrangeHRM is an open source HR website. I used its public demo site to practice manual testing on my phone. I tested two areas: Login and PIM, Add Employee.

In each area I first tried the normal flow. Then I tried wrong or unusual values like empty fields, a wrong password, numbers and symbols in a name, a very long name and a name with only spaces. I noted the result and saved screenshots as proof. The phone clock is visible in the screenshots, so you can see when each step was done.

What was included

- Login with empty fields, a wrong password and a small letter username
- What happens after a long wait on the page
- Opening the Add Employee form
- Adding an employee with valid data, empty names, numbers, symbols, a very long name, spaces and a duplicate Employee Id

What I did not cover

I did not test the employee photo upload, searching, editing or deleting employees, the Forgot your password link, a wrong username, the Enter key on the login form, the Back button after login, or other modules like Leave and Time. I also did not test performance, security, accessibility, other browsers or devices, or APIs.

2. How I tested

I explored each page, filled in the form and checked the message or result that came up. Then I compared what happened with what I expected. I did not have a requirements document, so the expected results are my own judgement. In a few cases I could not say what the right behavior is, so I marked them as observations.

The demo site is public and many people use it at the same time. So the data can change while I test, and a few results may be caused by that.

Environment: OrangeHRM open source demo, Android phone browser, manual testing. **Test date:** 17 October 2026.

3. Results at a glance

Module	Cases	Pass	Fail	Other
Login	7	5	0	2
PIM, Add Employee	10	7	1	2
Total	**17**	**12**	**1**	**4**

The four cases under Other are observations (TC-LOGIN-06, TC-LOGIN-07, TC-PIM-06 and TC-PIM-07). I did not count them as a pass or a fail because I had no requirements to compare with.

Main things I noticed

- The login checks worked well. Empty fields showed Required and a wrong password showed Invalid credentials.
- The username is not case sensitive. Typing admin in small letters logged me in.
- Add Employee checked the required names, the 30 letter limit and a name with only spaces.
- Names with numbers and symbols were accepted.
- The Employee Id that the form filled in by itself was already taken in 3 of the 7 times I opened the form.
- After about 25 minutes the page sent me back to the Login page with no message.

4. Defects found

ID	Issue I saw	Severity	Test case
BUG-01	The Employee Id that the form fills in by itself often already exists, so Save fails with a valid employee.	Low	TC-PIM-02

The Employee Id was already taken in 3 of the 7 times I opened the form (0397, 0377 and 0388). Because many people use this demo site, other users may have taken those numbers. So this is a possible issue and not a sure bug. Severity is my own judgement.

5. Other observations

These items are not in the defect list but they may be worth checking.

5.1 Login details on the page: The demo username and password are shown on the Login page. This is normal for a demo site. A real site should never show them.

5.2 Session ended: After about 25 minutes the page sent me back to the Login page and did not show a message like Session expired.

5.3 Username is not case sensitive: The username admin in small letters worked the same as Admin. This is common, but it is different from SauceDemo where the capital letter mattered. I did not mark it as a bug because I had no requirement.

5.4 Names with numbers and symbols: The names Test123 and $#@Test were saved. Real HR systems usually do not allow this, but I had no requirement, so I listed it as an observation.

5.5 Success message: The green Successfully Saved message stays on the screen for only a few seconds. It is easy to miss, so I used the profile page as proof that the employee was saved.

6. Test case index

All 17 test cases are listed here. The steps and screenshots for each one are in section 8.

ID	Test case	Result	Defect
Login			
TC-LOGIN-01	Login page loads on mobile	Pass	None
TC-LOGIN-02	Both fields empty	Pass	None
TC-LOGIN-03	Only Username filled	Pass	None
TC-LOGIN-04	Only Password filled	Pass	None

ID	Test case	Result	Defect
TC-LOGIN-05	Correct username with a wrong password	Pass	None
TC-LOGIN-06	Username in small letters with the correct password	Observation	None
TC-LOGIN-07	Page after a long wait	Observation	None
PIM, Add Employee			
TC-PIM-01	Add Employee form opens	Pass	None
TC-PIM-02	Save with valid names and the Employee Id that the form filled in	Fail	BUG-01
TC-PIM-03	Save with a different Employee Id	Pass	None
TC-PIM-04	All name fields empty	Pass	None
TC-PIM-05	Only First Name filled	Pass	None
TC-PIM-06	Numbers in First Name	Observation	None
TC-PIM-07	Special characters in First Name	Observation	None
TC-PIM-08	Very long First Name	Pass	None
TC-PIM-09	Only spaces in First Name	Pass	None
TC-PIM-10	A space before the name	Pass	None

7. Conclusion and what I would test next

The login page and the required field checks worked well. The main thing I found is the Employee Id that the form fills in by itself, which was often already taken. I also noticed that names with numbers and symbols are accepted, and that the session ends without any message.

If I continued testing I would:

- Upload a photo to an employee, first a normal JPG and then a wrong file like a PDF
- Search for the employee I created and then edit and delete my own test employees
- Test a wrong username, the username in capital letters, the Enter key and the Forgot your password link
- Check the Back button after login and after logout
- Test other modules like Leave and Time

This was a practice exercise on a public demo site. It is not a real HR system.

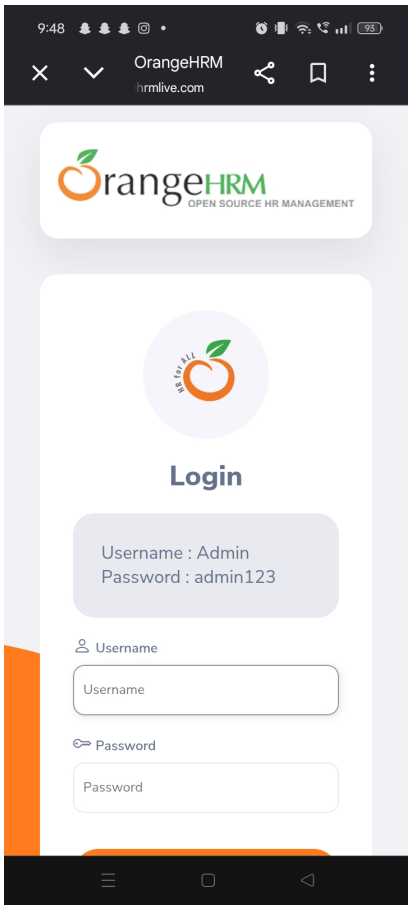

8. Detailed test cases with evidence

Every test case lists the steps, test data, expected result, actual result and the screenshots I used as proof. The time in brackets is the phone clock shown in the screenshot.

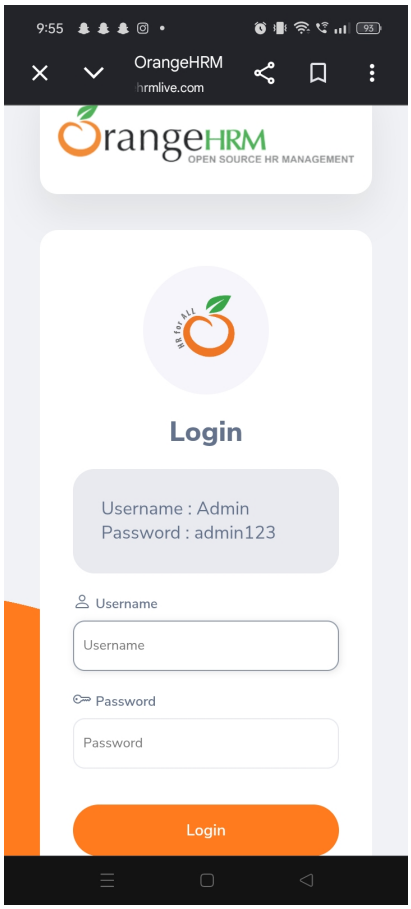

8.1 Login

TC-LOGIN-01 Login page loads on mobile	PASS
Steps	1. Open the OrangeHRM demo site on the phone 2. Look at the page and scroll down
Test data	None
Expected	The Login page shows the username and password fields and a Login button.
Actual	The page showed the logo, the demo username and password, both fields and the Login button. Below the button there is a Forgot your password link. The footer says OrangeHRM OS 5.9.

Evidence

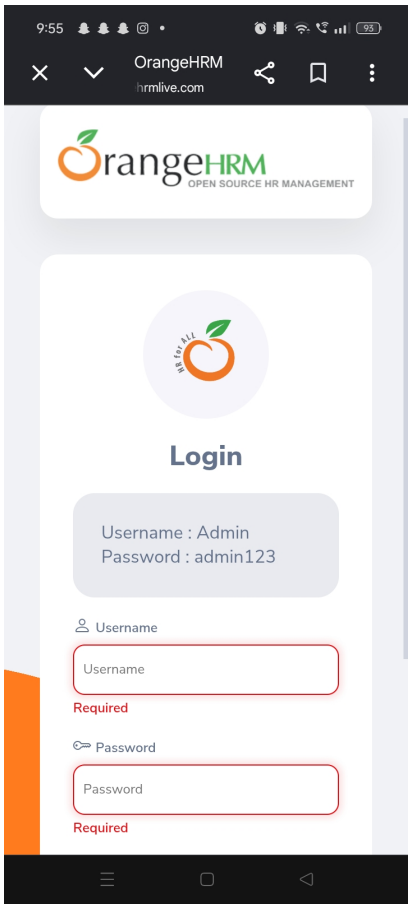

Login page (9:48)

Scrolled down to the Login button (9:55)

TC-LOGIN-02 Both fields empty	PASS
Steps	1. Leave Username and Password empty 2. Click Login
Test data	Both fields empty
Expected	Both fields show "Required".
Actual	Both fields turned red and showed "Required" under them. I was not logged in.

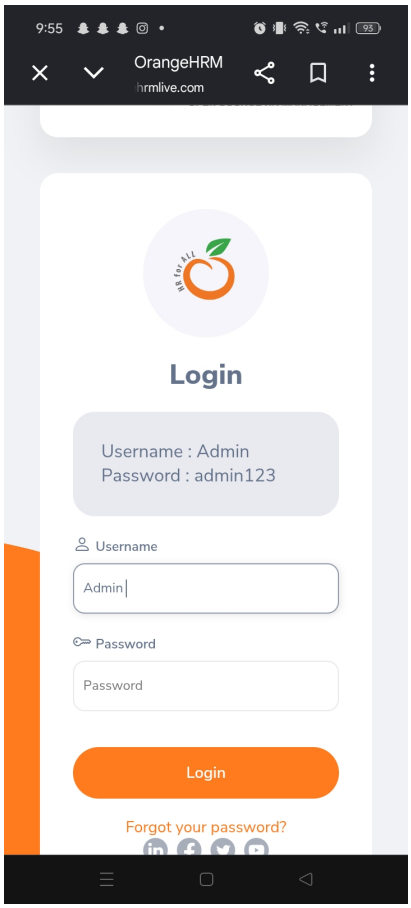

Evidence

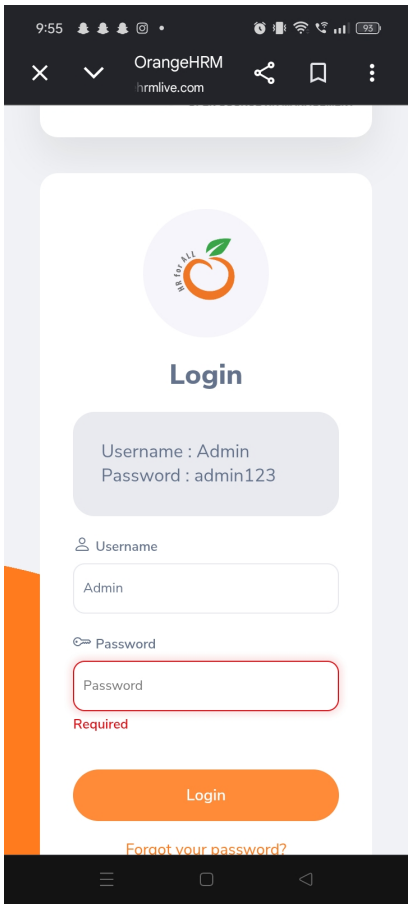

Required on both fields (9:55)

TC-LOGIN-03 Only Username filled	PASS
Steps	1. Type Admin in Username 2. Leave Password empty 3. Click Login
Test data	Username: Admin; password: (empty)
Expected	"Required" shows under Password.
Actual	The Password field turned red and showed "Required".

Evidence

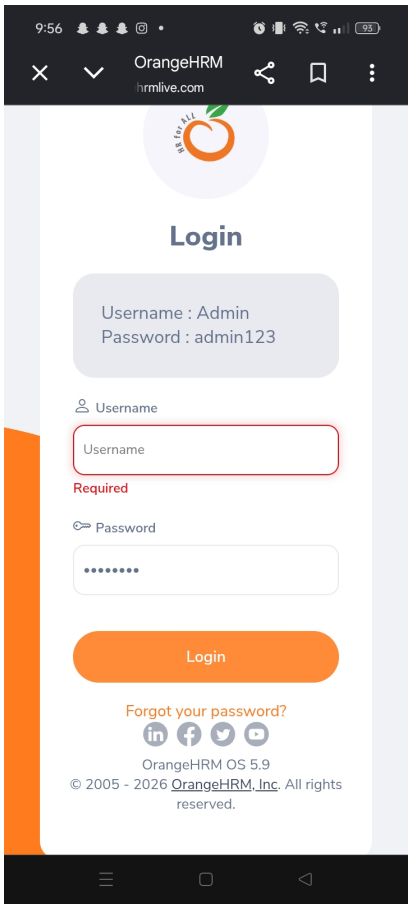

Admin typed (9:55)

Required under Password (9:55)

TC-LOGIN-04 Only Password filled	PASS
Steps	1. Leave Username empty 2. Type a password 3. Click Login
Test data	Username: (empty); password: typed
Expected	"Required" shows under Username.
Actual	The Username field turned red and showed "Required". The password stayed hidden as dots.

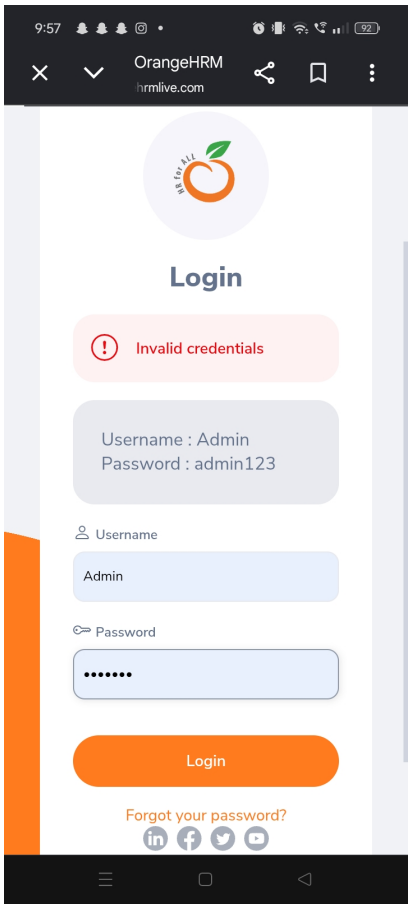

Evidence

Required under Username (9:56)

TC-LOGIN-05 Correct username with a wrong password	PASS
Steps	1. Type Admin in Username 2. Type a wrong password 3. Click Login
Test data	Username: Admin; password: wrong
Expected	Login is blocked with an error message.
Actual	A red "Invalid credentials" message showed and I was not logged in. The message does not say if the username or the password is wrong.

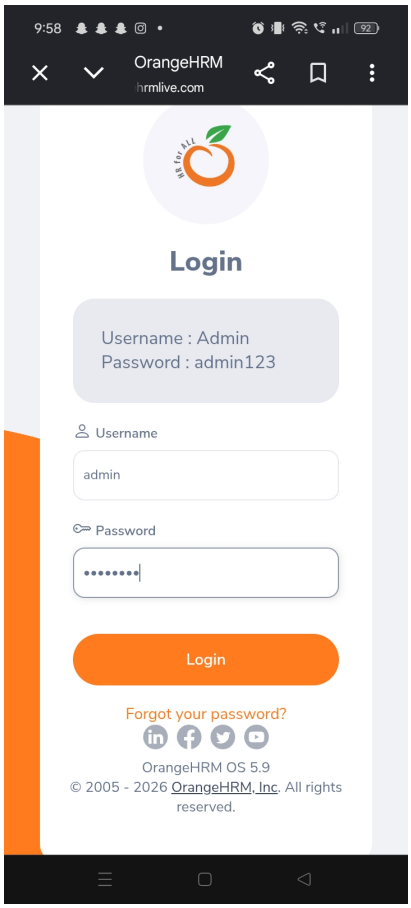

Evidence

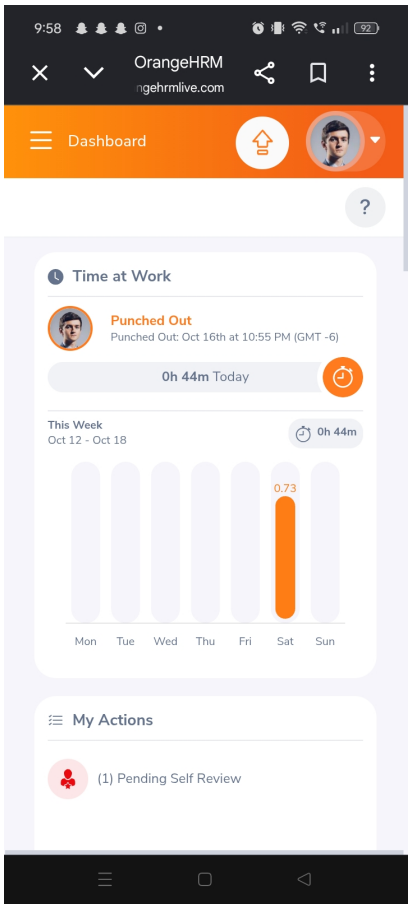

Invalid credentials (9:57)

TC-LOGIN-06 Username in small letters with the correct password	OBSERVATION
Steps	1. Type admin (small a) in Username 2. Type admin123 in Password 3. Click Login
Test data	Username: admin; password: admin123
Expected	Not clear. The demo page shows the username as Admin.
Actual	I was logged in and the Dashboard opened. So the username is not case sensitive (see observation 5.3).

Evidence

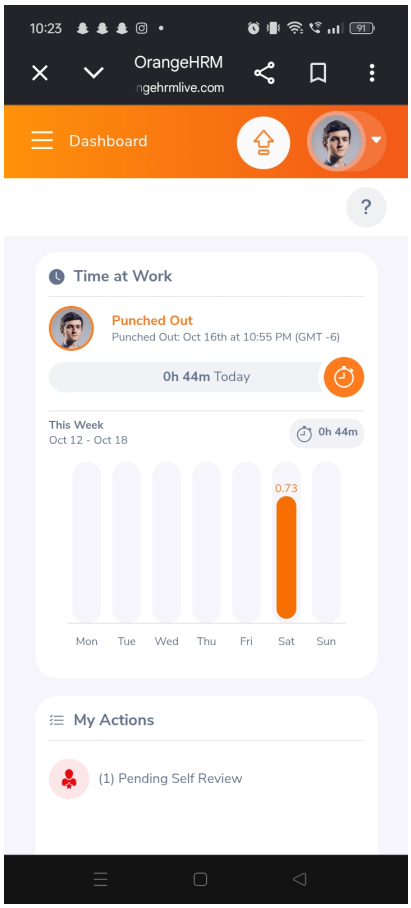

admin and password typed (9:58)

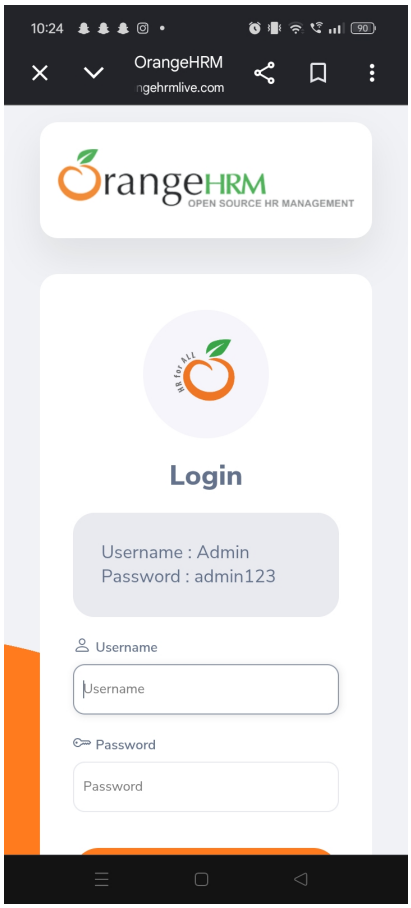

Dashboard opened (9:58)

TC-LOGIN-07 Page after a long wait	OBSERVATION
Steps	1. Log in and open the Dashboard (9:58) 2. Leave the page for about 25 minutes 3. Tap PIM in the menu
Test data	None
Expected	Either the PIM page opens or a message says the session ended.
Actual	The Login page opened again with no message (10:24). It looks like the session ended (see observation 5.2).

Evidence

Dashboard (10:23)

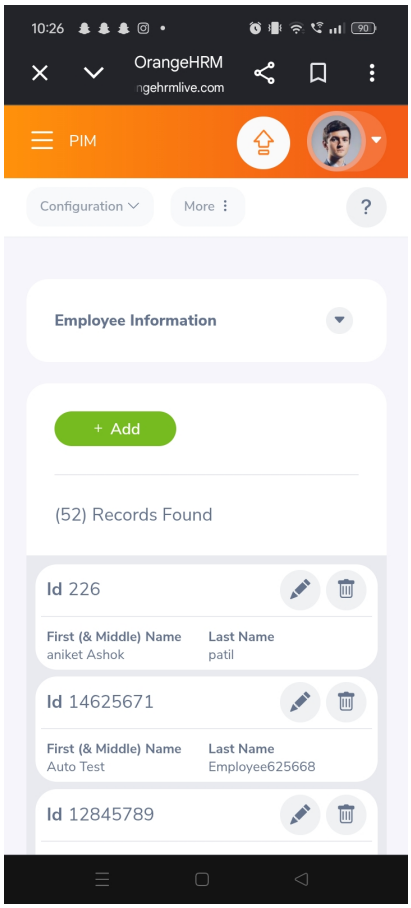

Login page again (10:24)

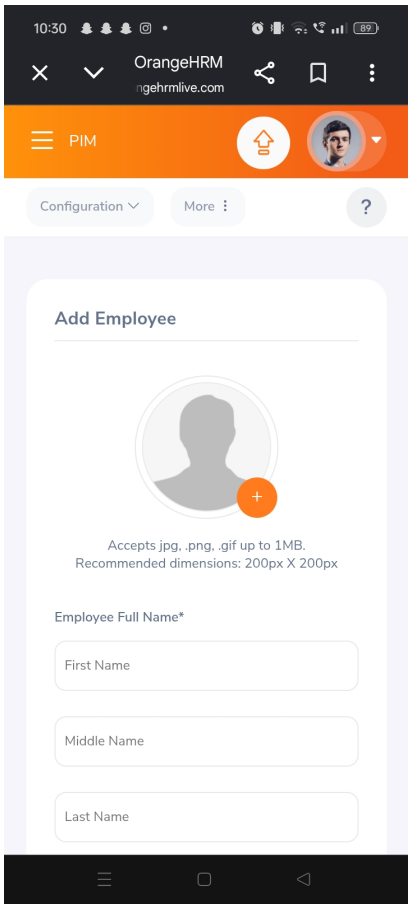

8.2 PIM, Add Employee

TC-PIM-01 Add Employee form opens	PASS
Steps	1. Log in and open the menu 2. Open PIM 3. Tap + Add
Test data	None
Expected	The Add Employee form opens.
Actual	The PIM list showed (52) Records Found. After I tapped + Add the form opened. It has a photo area, First Name, Middle Name, Last Name, Employee Id, a Create Login Details switch and the Cancel and Save buttons. The star (*) is only on Employee Full Name.

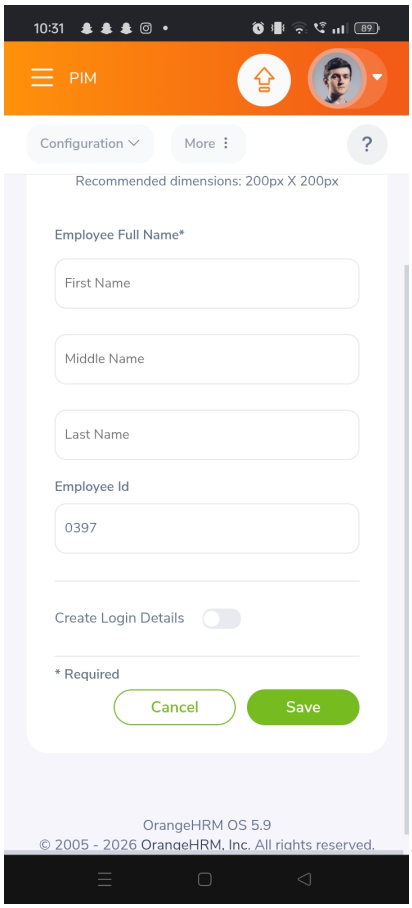

Evidence

PIM list (10:26)

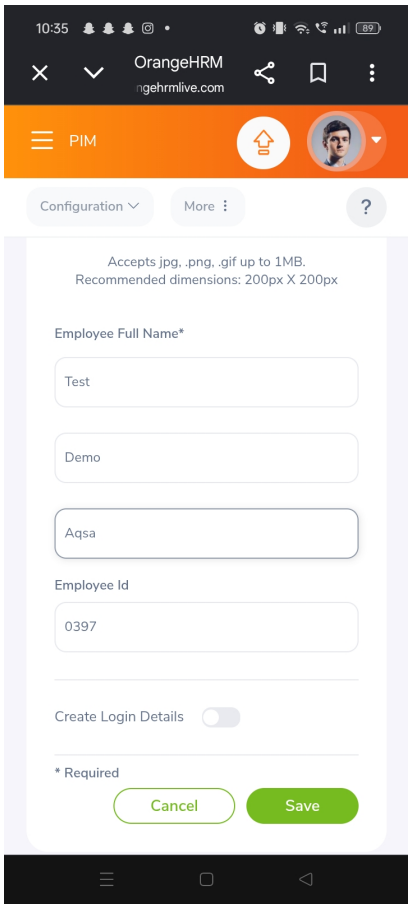

Add Employee form (10:30)

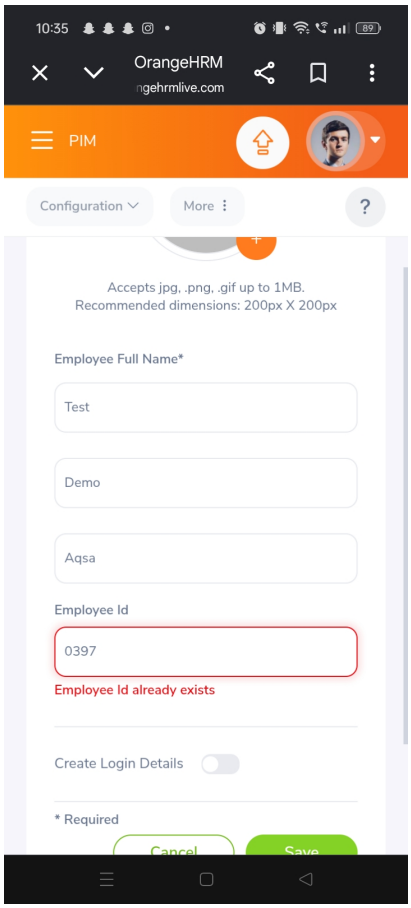

Bottom of the form (10:31)

TC-PIM-02 Save with valid names and the Employee Id that the form filled in	FAIL
Steps	1. Open the Add Employee form 2. Type Test, Demo and Aqsa in the name fields 3. Keep the Employee Id that the form filled in (0397) 4. Click Save
Test data	First: Test; middle: Demo; last: Aqsa; Id: 0397
Expected	The employee is saved.
Actual	Save did not work. A red "Employee Id already exists" message showed under Employee Id. The same thing happened with the Ids 0377 and 0388 on other tries.
Defect	BUG-01 - **Low**

Evidence

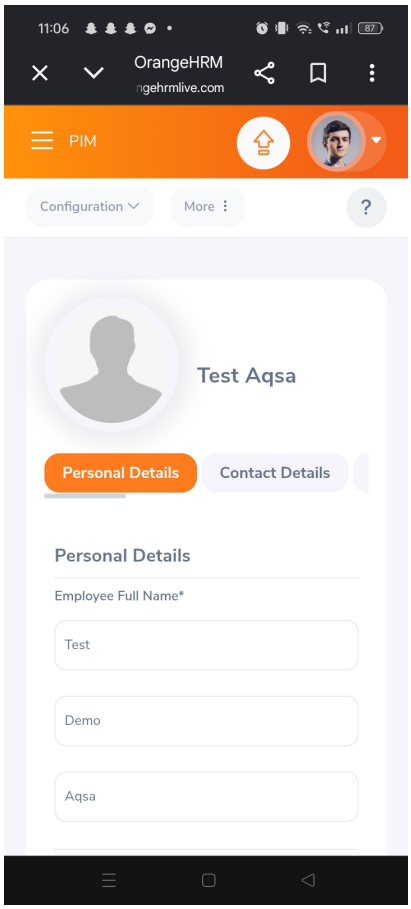

Names typed (10:35)

Employee Id already exists (10:35)

TC-PIM-03 Save with a different Employee Id	PASS
Steps	1. Open the Add Employee form 2. Type Test, Demo and Aqsa in the name fields 3. Change the Employee Id to a different number 4. Click Save
Test data	Names: Test, Demo, Aqsa; Id: a different number
Expected	The employee is saved and the profile opens.
Actual	The employee was saved and the profile page opened with the name Test Aqsa.

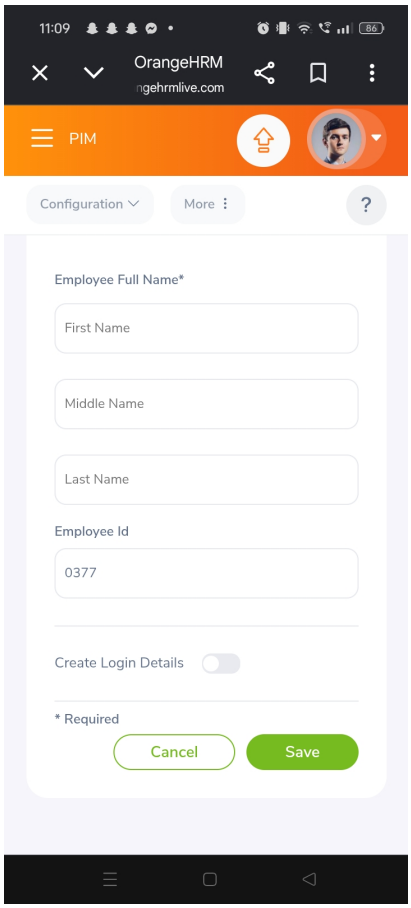

Evidence

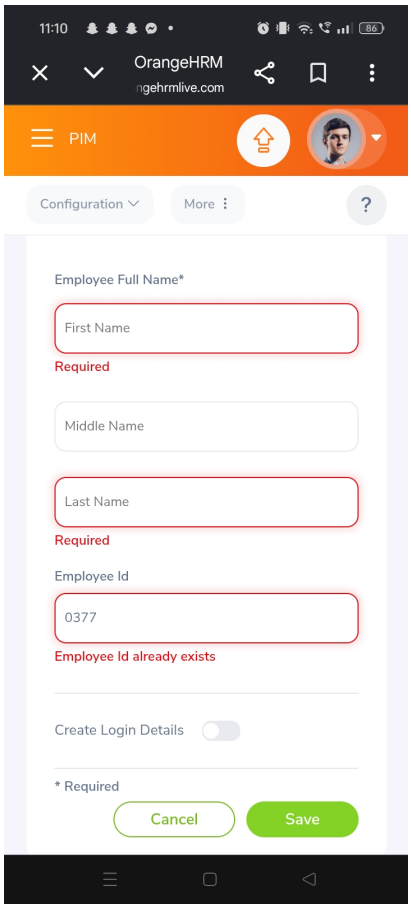

Profile opened (11:06)

TC-PIM-04 All name fields empty	PASS
Steps	1. Open the Add Employee form 2. Leave First, Middle and Last Name empty 3. Click Save
Test data	All name fields empty; Id: 0377 (filled by the form)
Expected	First Name and Last Name show "Required".
Actual	First Name and Last Name showed a red "Required". Middle Name did not, so it is optional. "Employee Id already exists" also showed for 0377.

Evidence

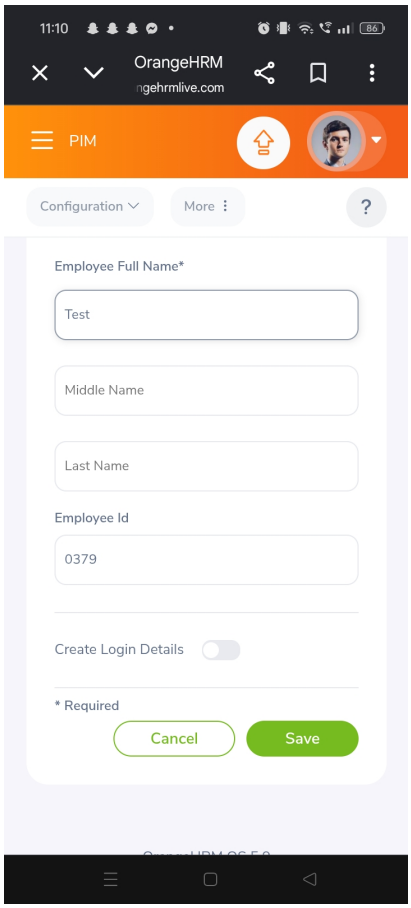

Empty form (11:09)

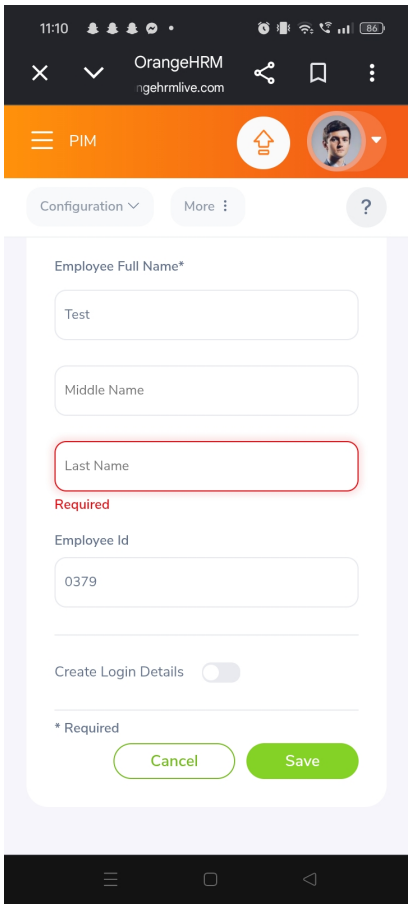

Required messages (11:10)

TC-PIM-05 Only First Name filled	PASS
Steps	1. Type Test in First Name 2. Leave Last Name empty 3. Click Save
Test data	First: Test; last: (empty)
Expected	"Required" shows under Last Name.
Actual	Only Last Name showed a red "Required".

Evidence

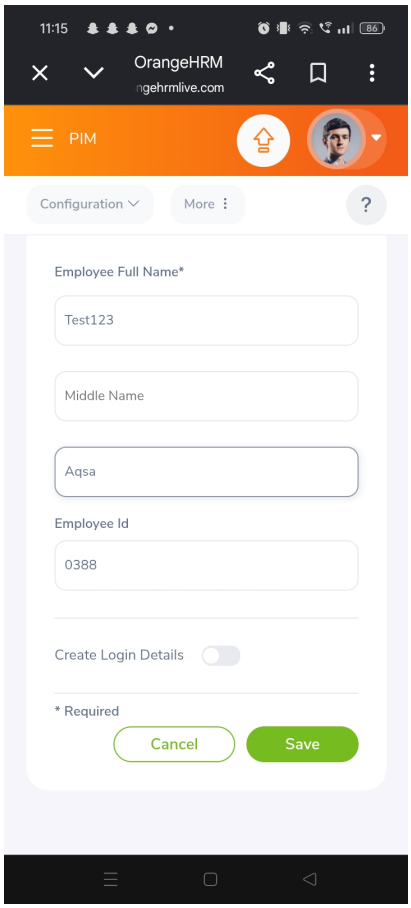

Test typed (11:10)

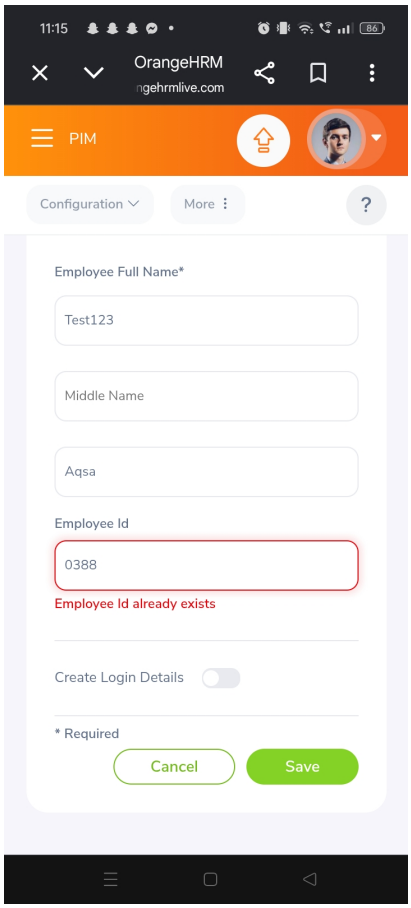

Required under Last Name (11:10)

TC-PIM-06 Numbers in First Name	OBSERVATION
Steps	1. Type Test123 in First Name 2. Type Aqsa in Last Name 3. Click Save 4. If needed, use a different Employee Id and save again
Test data	First: Test123; last: Aqsa
Expected	Not clear. A name with numbers would normally be rejected.
Actual	The first try showed "Employee Id already exists" for 0388. After I used a different Id the employee was saved with the name Test123 Aqsa (see observation 5.4).

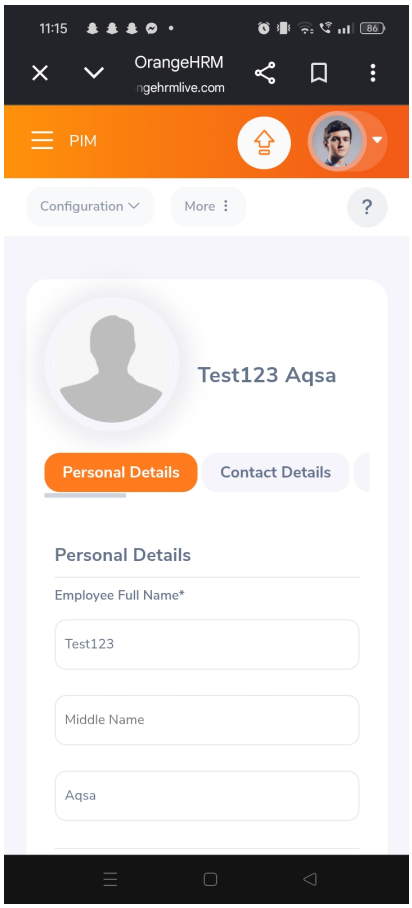

Evidence

Test123 typed (11:15)

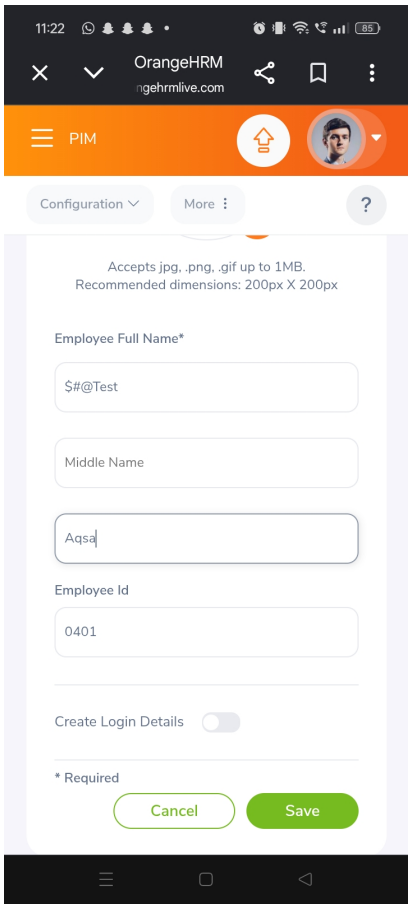

Employee Id already exists (11:15)

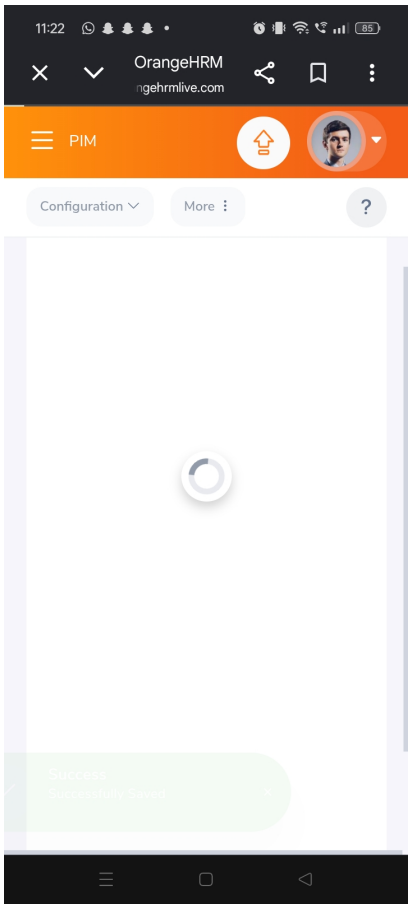

Saved as Test123 Aqsa (11:15)

TC-PIM-07 Special characters in First Name	OBSERVATION
Steps	1. Type $#@Test in First Name 2. Type Aqsa in Last Name 3. Click Save
Test data	First: $#@Test; last: Aqsa
Expected	Not clear. Symbols in a name would normally be rejected.
Actual	The employee was saved. "Successfully Saved" showed for a moment and the profile opened with the name $#@Test Aqsa (see observation 5.4).

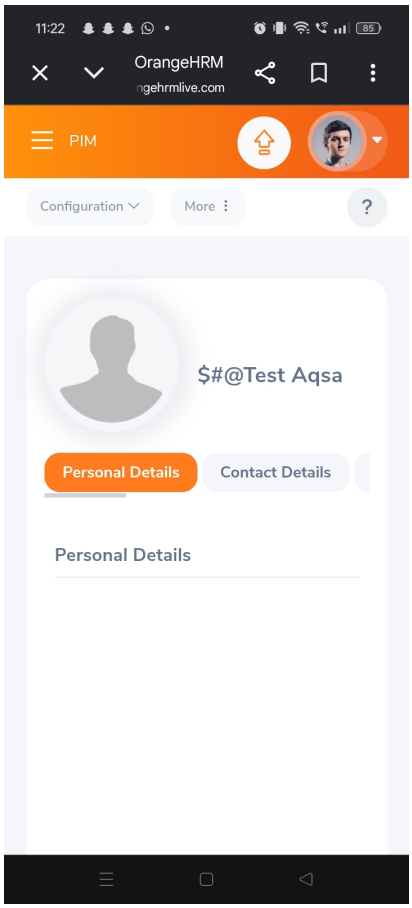

Evidence

$#@Test typed (11:22)

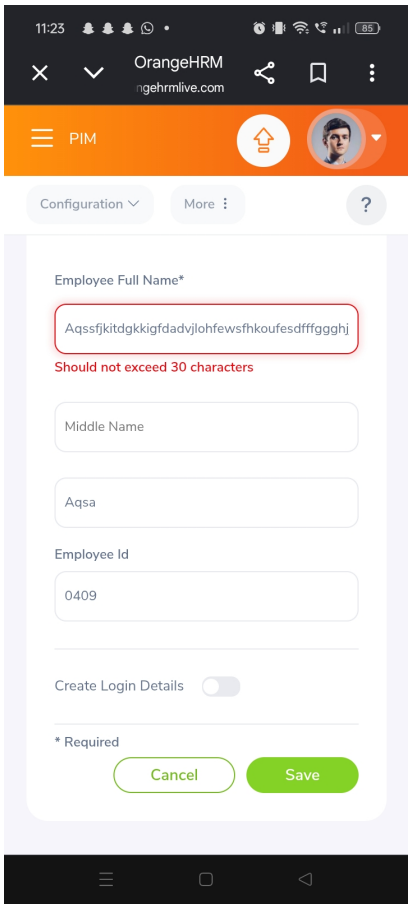

Successfully Saved message (11:22)

Profile opened (11:22)

TC-PIM-08 Very long First Name	PASS
Steps	1. Type a very long text (more than 30 letters) in First Name 2. Type Aqsa in Last Name 3. Click Save
Test data	First Name: more than 30 letters
Expected	A message about the length.
Actual	A red message "Should not exceed 30 characters" showed and the employee was not saved.

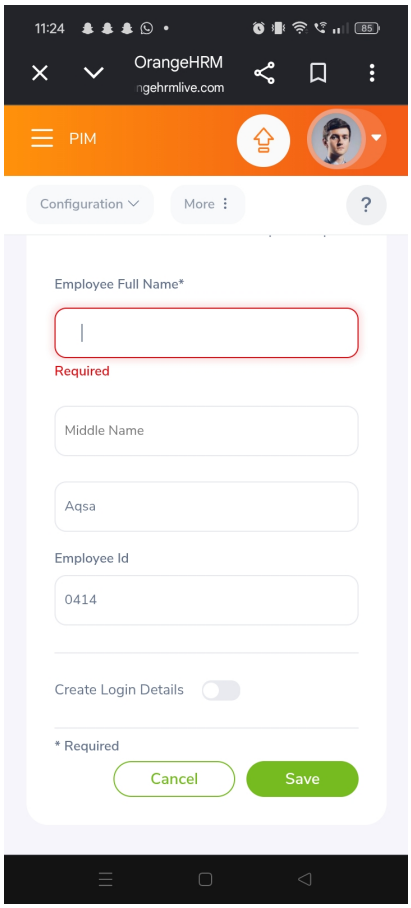

Evidence

Length message (11:23)

TC-PIM-09 Only spaces in First Name	PASS
Steps	1. Press the space bar a few times in First Name and type nothing else 2. Type Aqsa in Last Name 3. Click Save
Test data	First Name: spaces only
Expected	"Required" shows under First Name.
Actual	The field was treated as empty and showed a red "Required".

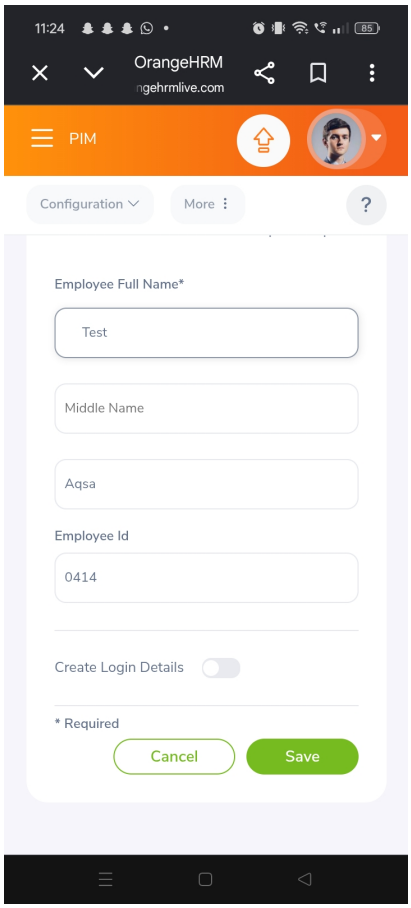

Evidence

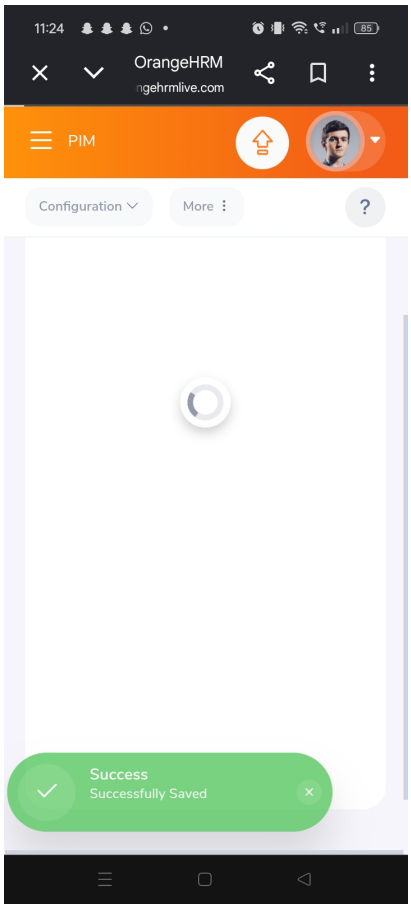

Required under First Name (11:24)

TC-PIM-10 A space before the name	PASS
Steps	1. Type a space and then Test in First Name 2. Type Aqsa in Last Name 3. Click Save
Test data	First Name: a space and then Test
Expected	The employee is saved.
Actual	The employee was saved ("Successfully Saved" showed) and the profile shows the name Test Aqsa.

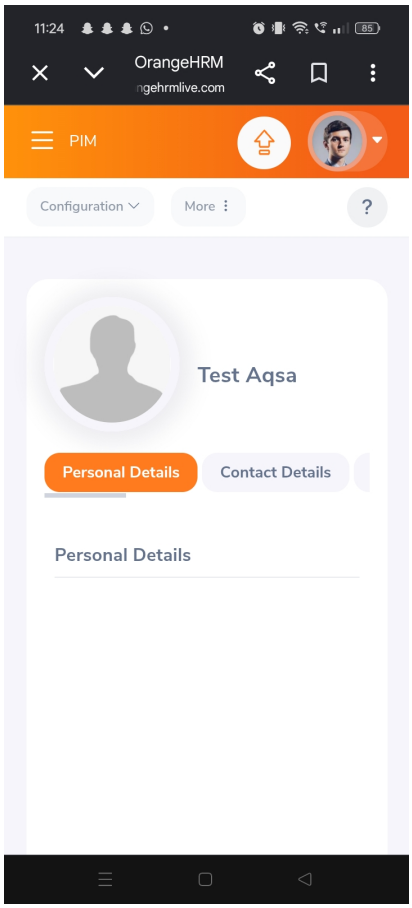

Evidence

Space and Test typed (11:24)

Successfully Saved message (11:24)

Profile opened (11:24)
